To the purchaser—your cooling off rights

Your right to a cooling off period

- 1 You are signing a contract to buy a vehicle. If finance for the purchase is being provided by the dealer or the dealer is arranging or facilitating the provision of credit through a linked credit provider, you may take advantage of a cooling off period. This is a period in which you may change your mind about buying the vehicle and terminate the contract. This does not apply to you if you are a trade owner or if this is an auction sale or if the vehicle is a commercial vehicle.

When you may terminate the contract

- 2 Under the *Motor Dealers Act 1974* you have the right to decide within one business day of signing the contract not to proceed with the purchase and to terminate the sale agreement. You may take this action up until the end of the cooling off period. The period ends at the end of the next business day after you sign the contract that the dealer is open for business until 5pm. If the dealer closes before 5pm on the next business day, the cooling off period ends at the close of business on the next day that the dealer is open for business.

How to terminate contract

- 3 You may terminate the contract by giving a written notice to the dealer. The notice may be signed by you or by your solicitor or barrister.

Your rights to possession of vehicle during cooling off period

- 4 You will not be able to take possession of the vehicle during the cooling off period unless the dealer agrees. If the dealer has agreed to let you take possession of the vehicle during the cooling off period, you may still terminate the contract.

Amendments

Schedule 1

Your obligations on termination of the contract

- 5 If you terminate the contract on or before the end of the cooling off period, you will have to pay the dealer \$250 or 2% of the purchase price, whichever is the lesser amount. You will also have to repay to the dealer any amount paid for a trade-in. You will also be required to return the vehicle if you have taken delivery of it.

The dealer's obligations on termination of the contract

- 6 It will be an offence for the dealer to dispose of a vehicle traded-in as part of the sale during the cooling off period. When the contract is terminated the dealer must repay to you all other amounts paid by you (less the amounts you have to pay as referred to above). The dealer must also return any trade-in vehicle and must pay for any damage to that vehicle caused while in the dealer's possession, other than fair wear and tear. If the trade-in vehicle is incapable of being driven or is unroadworthy because of a defect not caused by you or the dealer, the dealer must permit it to be collected by you.

Giving up your cooling off rights

- 7 You may give up your right to a cooling off period for this purchase by a signing a waiver of the right, in the form required under the *Motor Dealers Act 1974*. If you sign the waiver, you will lose the right to terminate the contract during the cooling off period.

Notice of Final Determination and Amendment of Schedule 1 to Act

under the

Threatened Species Conservation Act 1995 No 101

The Scientific Committee established under the *Threatened Species Conservation Act 1995* has, in pursuance of Division 3 of Part 2 of that Act, made a final determination to insert the following species of plant as an endangered species in Part 1 of Schedule 1 to that Act and, accordingly, that Schedule is amended as set out in Annexure “A” to this Notice:

Plants

Asteraceae

Leptorhynchos orientalis Paul G. Wilson

The final determination to insert this species in Part 1 of Schedule 1 has been made because the Scientific Committee is of the opinion that the species is likely to become extinct in nature in New South Wales unless the circumstances and factors threatening its survival or evolutionary development cease to operate.

Copies of the final determination may be inspected during business hours at:

The Scientific Committee established under the *Threatened Species Conservation Act 1995* has, in pursuance of Division 3 of Part 2 of that Act, made a final determination to insert the following ecological community as an endangered ecological community in Part 3 of Schedule 1 to that Act and, accordingly, that Schedule is amended as set out in Annexure "A" to this Notice:

Hunter Lowland Redgum Forest in the Sydney Basin and New South Wales North Coast Bioregions (as described in the final determination of the Scientific Committee to list the ecological community)

Hunter Lowland Redgum Forest in the Sydney Basin and New South Wales North Coast Bioregions (as described in the final determination of the Scientific Committee to list the ecological community)

NSW SCIENTIFIC COMMITTEE

Final Determination

The Scientific Committee, established by the Threatened Species Conservation Act, has made a Final Determination to list the Hunter Lowland Redgum Forest in the Sydney Basin and NSW North Coast Bioregions as an ENDANGERED ECOLOGICAL COMMUNITY in Part 3 of Schedule 1 of the Act. Listing of endangered ecological communities is provided for by Part 2 of the Act.

The Scientific Committee has found that:

1. Hunter Lowland Redgum Forest in the Sydney Basin and NSW North Coast Bioregions is the name given to the ecological community found on gentle slopes arising from depressions and drainage flats on permian sediments of the Hunter Valley floor in the Sydney Basin and NSW North Coast Bioregions and characterised by the following assemblage of species:

<i>Angophora costata</i>	<i>Austrodanthonia monticola</i>
<i>Billardiera scandens</i>	<i>Breynia oblongifolia</i>
<i>Brunoniella australis</i>	<i>Cheilanthes sieberi</i> subsp. <i>sieberi</i>
<i>Corymbia maculata</i>	<i>Cyanthillium cinereum</i>
<i>Cymbopogon refractus</i>	<i>Daviesia ulicifolia</i>
<i>Desmodium varians</i>	<i>Dichondra repens</i>
<i>Digitaria parviflora</i>	<i>Echinopogon caespitosus</i> var. <i>caespitosus</i>
<i>Entolasia stricta</i>	<i>Eragrostis brownii</i>
<i>Eragrostis leptostachya</i>	<i>Eucalyptus crebra</i>
<i>Eucalyptus moluccana</i>	<i>Eucalyptus punctata</i>
<i>Eucalyptus tereticornis</i>	<i>Glycine clandestina</i>
<i>Imperata cylindrica</i> var. <i>major</i>	<i>Jacksonia scoparia</i>
<i>Lagenifera stipitata</i>	<i>Leucopogon juniperinus</i>
<i>Lomandra longifolia</i>	<i>Lomandra multiflora</i> subsp. <i>multiflora</i>
<i>Microlaena stipoides</i> var. <i>stipoides</i>	<i>Panicum simile</i>
<i>Paspalidium distans</i>	<i>Persoonia linearis</i>
<i>Pomax umbellata</i>	<i>Pratia purpurascens</i>
<i>Solanum prinophyllum</i>	<i>Themeda australis</i>

2. The total species list of the community is considerably larger than that given above, with many species present in only one or two sites or in very small quantity. The species composition of a site will be influenced by the size of the site, recent rainfall or drought condition and by its disturbance (including fire) history. The number of species, and the above ground relative abundance of species will change with time since fire, and may also change in response to changes in fire regime (including changes in fire frequency). At any one time, above ground individuals of some species may be absent, but the species may be represented below ground in the soil seed banks or as dormant structures such as bulbs, corms, rhizomes, rootstocks or lignotubers. The list of species given above is of vascular plant species, the community also includes micro-organisms, fungi, cryptogamic plants and a diverse fauna, both vertebrate and invertebrate. These components of the community are poorly documented.

3. Hunter Lowland Redgum Forest in the Sydney Basin and NSW North Coast Bioregions has been recorded from the local government areas of Maitland, Cessnock and Port Stephens (in the Sydney Basin Bioregion) and Muswellbrook and Singleton (in the NSW North Coast Bioregion) but may occur elsewhere in these bioregions.
4. The Community is described and discussed in NSW NPWS (2000) as MU 19 – Hunter Lowland Redgum Forest.
5. The Hunter Lowland Redgum Forest in the Sydney Basin and NSW North Coast Bioregions is generally an open forest with most common canopy trees species being *Eucalyptus tereticornis* and *Eucalyptus punctata* although other frequently occurring canopy species are *Angophora costata*, *Corymbia maculata*, *Eucalyptus crebra* and *Eucalyptus moluccana*, with a number of other eucalypts being less frequently recorded. The mid stratum is characterised as open with sparse shrubs of *Breynia oblongifolia*, *Leucopogon juniperinus*, *Daviesia ulicifolia* and *Jacksonia scoparia*. There is consistently a ground layer of grasses and herbs, characterised by *Microlaena stipoides* var. *stipoides*, *Cymbopogon refractus*, *Echinopogon caespitosus* var. *caespitosus*, *Cheilanthes sieberi* subsp. *sieberi* and *Pratia purpurascens*.
6. Currently only a small area (less than 2% of total) of Hunter Lowland Redgum Forest in the Sydney Basin and NSW North Coast Bioregions is included in National Parks and Wildlife Service estate in the Lower Hunter (Wereketa) National Park. The majority of the remainder of the community is not on public land.
7. Modelling included in NSW NPWS (2000) shows that much of the pre-1750 extent of the community has been cleared. Only about 27% (less than 500 ha) of the original distribution survives and this is highly fragmented.
8. Although much of the clearing occurred early in European settlement, clearing still continues at a high rate. Between 1988 and 2001 approx 2380 ha were approved for clearing (advice from Department of Land and Water Conservation August 2001). In addition to clearing and fragmentation other threats include grazing, weed invasion, altered fire frequency and, locally, rubbish dumping.
9. In view of the above the Scientific Committee is of the opinion that the Hunter Lowland Redgum Forest in the Sydney Basin and NSW North Coast Bioregions is likely to become extinct in nature in New South Wales unless the circumstances and factors threatening its survival or evolutionary development cease to operate.

under the

Threatened Species Conservation Act 1995

The Scientific Committee established under the *Threatened Species Conservation Act 1995* has, in pursuance of Division 3 of Part 2 of that Act, made a final determination to insert the following species of insect as a species presumed extinct in Part 4 of Schedule 1 to that Act and, accordingly, that Schedule is amended as set out in Annexure “A” to this Notice:

Animals

Arthropoda

Insecta

Coleoptera

Curculionidae

Hybomorphus melanosomus (Saunders & Jekel, 1885) Lord Howe Island ground weevil

The final determination to insert this species in Part 4 of Schedule 1 has been made because the Scientific Committee is of the opinion that the species has not been located in nature during the preceding 50 years despite searching of known and likely habitats during that period.

The Scientific Committee established under the *Threatened Species Conservation Act 1995* has, in pursuance of Division 3 of Part 2 of that Act, made a final determination to insert the following matter as a key threatening process in Schedule 3 to that Act and, accordingly, that Schedule is amended as set out in Annexure “A” to this Notice:

Infection of native plants by *Phytophthora cinnamomi*

The final determination to insert this matter in Schedule 3 has been made because the Scientific Committee is of the opinion that infection of native plants by *Phytophthora cinnamomi* adversely affects two or more threatened species or ecological communities and could cause species that are not threatened to become threatened.

Schedule 1 to the *Threatened Species Conservation Act 1995* is amended by inserting in Part 3 in alphabetical order the matter:

Warkworth Sands Woodland of the Sydney Basin Bioregion (as described in the final determination of the Scientific Committee to list the ecological community)

NSW SCIENTIFIC COMMITTEE

Final Determination

The Scientific Committee, established by the Threatened Species Conservation Act, has made a Final Determination to list the Warkworth Sands Woodland in the Sydney Basin Bioregion as an ENDANGERED ECOLOGICAL COMMUNITY in Part 3 of Schedule 1 of the Act. The listing of endangered ecological communities is provided for by Part 2 of the Act.

The Scientific Committee has found that:

1. Warkworth Sands Woodland in the Sydney Basin Bioregion is the name given to the ecological community occurring on aeolian sand deposits south east of Singleton in the Hunter Valley. This ecological community is currently known to occur in the local government area of Singleton but may occur elsewhere in the Bioregion.
2. Warkworth Sands Woodland is characterised by the following assemblage of species.

<i>Acacia falcata</i>	<i>Acacia filicifolia</i>
<i>Ajuga australis</i>	<i>Allocasuarina littoralis</i>
<i>Allocasuarina luehmannii</i>	<i>Amyema pendulum</i>
<i>Angophora floribunda</i>	<i>Aristida calycina</i>
<i>Aristida ramosa</i>	<i>Aristida vagans</i>
<i>Aristida warburgii</i>	<i>Banksia integrifolia</i>
<i>Brachyloma daphnoides</i>	<i>Breynia oblongifolia</i>
<i>Callitris endlicheri</i>	<i>Calotis cuneifolia</i>
<i>Cheilanthes sieberi</i>	<i>Chrysocephalum apiculatum</i>
<i>Desmodium varians</i>	<i>Dianella revoluta</i>
<i>Dichondra species A</i>	<i>Echinopogon caespitosus</i>
<i>Echinopogon intermedius</i>	<i>Einadia trigonos</i>
<i>Entolasia stricta</i>	<i>Eucalyptus glaucina</i>
<i>Eucalyptus blakelyi/tereticornis intergrades</i>	<i>Eucalyptus crebra</i>
<i>Exocarpos cupressiformis</i>	<i>Exocarpos strictus</i>
<i>Hardenbergia violacea</i>	<i>Hibbertia linearis</i>
<i>Hovea linearis</i>	<i>Hypoxis hygrometrica</i>
<i>Imperata cylindrica</i>	<i>Indigofera australis</i>
<i>Jacksonia scoparia</i>	<i>Lomandra glauca</i>
<i>Lomandra leucocephala</i>	<i>Lomandra muticus</i>
<i>Melaleuca decora</i>	<i>Melaleuca thymifolia</i>
<i>Persoonia linearis</i>	<i>Pimelea linifolia</i>
<i>Pomax umbellata</i>	<i>Pteridium esculentum</i>
<i>Solanum prinophyllum</i>	<i>Vittadina sulcata</i>

3. The total species list of the community is considerably larger than that given above, with many species present in only one or two sites or in very small quantity. The species composition of a site will be influenced by the size of the site, recent rainfall or drought condition and by its disturbance (including fire) history. The number of species, and the above ground relative abundance of species will change with time since fire, and may also change in response to changes in fire regime (including changes in fire frequency). At any one time, above ground individuals of some species may be absent, but the species

may be represented below ground in the soil seed banks or as dormant structures such as bulbs, corms, rhizomes, rootstocks or lignotubers. The list of species given above is of vascular plant species, the community also includes micro-organisms, fungi, cryptogamic plants and a diverse fauna, both vertebrate and invertebrate. These components of the community are poorly documented.

4. Warkworth Sands Woodland is generally of woodland to low woodland structure with trees of *Angophora floribunda* and *Banksia integrifolia*, and shrubs and ground species including *Acacia filicifolia*, *Pteridium esculentum*, *Imperata cylindrica*, *Brachyloma daphnoides* and *Melaleuca thymifolia*.
5. Small drainage lines within the community may support a higher abundance of certain species (such as *Melaleuca thymifolia*) and less of others (such as *Banksia integrifolia*). Such areas are included as part of this community. In addition, adjacent areas, where woodland occurs on a shallow A horizon of sand, are included within this community.
6. The community supports a number of threatened species including squirrel glider (*Petaurus norfolcensis*), speckled warbler (*Pyrrholaemus saggitata*), brown tree creeper (*Climacteris picumnis* subsp. *victoriae*) and grey-crowned babbler (*Pomatosomus temporalis* subsp. *temporalis*).
7. Warkworth Sands Woodland occupies sand dunes generally 1-6 m high, resting on a river terrace. The main dune deposit is aligned NW-SE. The sand deposit is thought to be of Pleistocene age (Story *et al.* 1963).
8. Woodlands occurring adjacent to the sand dunes on Permian clays share many species with Warkworth Sands Woodland but also have a higher abundance of Permian substrate species, such as *Corymbia maculata*, *Eucalyptus moluccana*, *Allocasuarina luehmannii* and *Eucalyptus crebra*. These areas are not considered to be part of this community, except in ecotones where there is a dominant abundance of the species of the Warkworth Sands Woodland. This is generally where a thin sandy veneer overlies the Permian substrate.
9. Warkworth Sands Woodland is now mainly confined to a small area near Warkworth, about 15 km south east of Singleton in the Hunter Valley. This occurrence now comprises nearly 80% of the extant vegetation. Due to the extent of vegetation clearing and modification in other areas, the original extent is now difficult to estimate, though assuming the community occurred on most of the other occurrences of the Warkworth Land System (Story *et al.* 1963), except that at Kurri Kurri which is clearly different, the current Warkworth Sands Woodland extent may be as little as 13% of its pre-settlement extent.
10. Approximately 800 ha of Warkworth Sands Woodland (based on air photo interpretation, GIS mapping and field reconnaissance) remains. Ongoing threats include open-cut coalmining, sandmining and the construction of mining infrastructure as well as pressures from agricultural clearing, altered fire frequency, weed invasion and grazing.
11. No areas of Warkworth Sands Woodland occur within a conservation reserve.

12. In view of the above the Scientific Committee is of the opinion that the Warkworth Sands Woodland in the Sydney Basin Bioregion is likely to become extinct in nature in New South Wales unless the circumstances and factors threatening its survival or evolutionary development cease to operate.

COAL MINES REGULATION ACT 1982

APPROVAL OF EXPLOSION PROTECTED ELECTRICAL APPARATUS

PURSUANT to clause 70 of the Coal Mines (General) Regulation 1999, I, Robert Regan, Chief Inspector of Coal Mines approve, for the purposes of clause 140(1) of the Coal Mines (Underground) Regulation 1999, the type of explosion protected electrical apparatus, for the period and subject to the conditions set out in the Schedule.

Dated this 10th day of December 2002.

ROBERT REGAN,
Chief Inspector of Coal Mines

SCHEDULE

1 Type of apparatus approved

The type of apparatus approved is Group 1 electrical apparatus as defined in Section 4 of Part 0 of AS/NZS 60079.0:2000 Electrical apparatus for explosive gas atmospheres for which a current certificate of conformity has been issued by an accepted certification body as defined in Australian Standards Interim Miscellaneous Publication MP87 (Int: 2001) Australian/New Zealand Certification Scheme for explosion-protected electrical equipment (ANZEx Scheme) – Basic rule and procedures.

2 Commencement and duration of approval

This approval takes effect on and from 1 January 2003 and remains in force until it is revoked, varied or amended (with respect to a specified certificate number or otherwise).

3 Conditions of approval

This approval is given subject to the following conditions:

- (a) It is to be ensured that the supplier of the apparatus will maintain adequate records so that product safety notifications and/or recalls can be readily undertaken.
- (b) Before the apparatus is introduced into a hazardous zone (within the meaning of the Coal Mines (Underground) Regulation 1999), the user of the apparatus must –
 - (i) conduct a site specific risk assessment that conforms to MDG 1010 Risk management handbook for the mining industry or AS/NZS 4360:1999 Risk management encompassing the full life cycle of the apparatus; and
 - (ii) implement all appropriate risk controls identified.
- (c) Any conditions of installation, use or maintenance specified by the manufacturer or identified on the certificate of conformity must be complied with.
- (d) Each user of the apparatus must be supplied with a copy of the certificate of conformity and sufficient information (including apparatus drawings) to enable the apparatus to be installed, used and maintained in its certified condition.
- (e) Sufficient information (including apparatus drawings) must be maintained at the mine to enable the apparatus to be installed, used and maintained in its certified condition.

4 Effect of approval

Clause 140(1) of the Coal Mines (Underground) Regulation 1999 states that explosion protected electrical apparatus must not be used in a hazardous zone at a mine unless it is of an approved type and, under clause 5 of that Regulation, it is the duty of the mine manager to ensure that clause 140(1) is complied with. Clause 70 of the Mining (General) Regulation 1999 allows the Chief Inspector to approve, subject to conditions, a type of apparatus for the purposes of clause 140(1) of the first-mentioned Regulation.

The effect of this approval is that the relevant mine manager must ensure that only explosion protected electrical apparatus of the approved type is used in a hazardous zone and that the conditions of the approval are complied with.

This approval and the requirements under its conditions do not limit –

- (a) any obligations imposed on the mine manager or a mine electrical engineer by clause 9 (Standards of mechanical engineering practice & electrical engineering practice) of the Coal Mines (General) Regulation 1999 or any other provision of the Coal Mines Regulation Act 1982, the Occupational Health & Safety Act 2000 or the regulations under either of those Acts; or
- (b) any obligations imposed on the mine owner or any other person by any provision of those Acts or regulations.

5 This approval does not affect existing approvals

This approval –

- (a) does not apply to any apparatus (or apparatus of a type) covered by an approval given before 1 January 2003 pursuant to clause 70 of the Coal Mines (General) Regulation 1999 for the purposes of clause 140(1) of the Coal Mines (Underground) Regulation 1999 (or covered by an approval that has effect under clause 88 of the Coal Mines (General) Regulation 1999 for the purposes of clause 140(1) of the Coal Mines (Underground) Regulation 1999); and
- (b) does not affect the continuing operation of any approval referred to in paragraph (a), including the conditions of such an approval.

Clause 8 of the Model Provisions 1980, of the Environmental Planning and Assessment Act 1979, provides Kempsey Shire Council with the basis to establish a Tree Preservation Order. This legislation gives this Tree Preservation Order legal status enabling Council to initiate prosecution for breaches of this Tree Preservation Order.

 - iii to encourage the replanting of trees to replace those lost through development.
 - iv to protect the habitat of threatened species.
- b The aims and objectives will be achieved in areas where this Order applies by:
 - i Requiring written consent from Council for the removal and pruning of vegetation to which this Order applies.

1.5 DEFINITIONS

- a For the purposes of this Order, “a tree” is defined as:

A plant with a single trunk and with a trunk diameter of more than 200mm, measured at a point within 600mm of the ground level, and:

 - i Has a height of more than 3 metres; or
 - ii Is a heritage listed tree irrespective of size; or
 - iii Is rare or endangered plant/tree irrespective of size; or

- b For the purposes of this Order, “removal” is defined as:

The clearing, removing, cutting down, burning, ring barking, poisoning, substantially damaging, injuring or wilful destruction of a tree.
