# Gaming Machines Amendment (Miscellaneous) Regulation 2004

under the

Gaming Machines Act 2001

Her Excellency the Governor, with the advice of the Executive Council, has made the following Regulation under the *Gaming Machines Act 2001*.

GRANT McBRIDE, M.P.,

Minister for Gaming and Racing

### Explanatory note

The objects of this Regulation are as follows:

- (a) to make it clear that a registered club which has emerged as the result of the de-amalgamation of a dissolved club will only be required to provide a class 1 social impact assessment in connection with an application to keep gaming machines on the premises that were occupied by the dissolved club (so long as the application does not result in the club having more gaming machines than were previously kept on the premises of the dissolved club),
- (b) to make it clear that section 24A of the *Gaming Machines Act 2001* (which requires a registered club that has ceased to trade on any of its premises to forfeit any of the poker machine entitlements allocated in respect of those premises that have not been transferred within 12 months of the cessation of trade) will apply only if the club ceases to trade on the premises on or after 1 December 2003 (being the date of commencement of section 24A),
- (c) to provide for a number of additional offences under the *Gaming Machines Act 2001* and the *Gaming Machines Regulation 2002* to be dealt with by way of penalty notice,
- (d) to make other miscellaneous amendments to the *Gaming Machines Regulation 2002* that are of a minor or consequential nature.

This Regulation is made under the *Gaming Machines Act 2001*, including sections 34, 203 and 210 (the general regulation-making power) and clause 1 (1) of Schedule 1.

## THREATENED SPECIES CONSERVATION ACT 1995

### NSW SCIENTIFIC COMMITTEE

#### Final Determination

The Scientific Committee, established by the Threatened Species Conservation Act, has made a Final Determination to list the Coastal Saltmarsh in the NSW North Coast, Sydney Basin and South East Corner Bioregions, as an ENDANGERED ECOLOGICAL COMMUNITY in Part 3 of Schedule 1 of the Act. Listing of endangered ecological communities is provided for by Part 2 of the Act.

The Scientific Committee has found that:

1. Coastal Saltmarsh in the NSW North Coast, Sydney Basin and South East Corner Bioregions is the name given to the ecological community occurring in the intertidal zone on the shores of estuaries and lagoons including when they are intermittently closed along the NSW coast. Coastal saltmarsh has been recorded from sites along the NSW coast. (NSW North Coast, Sydney Basin and South East Corner Bioregions).

2. Characteristic vascular plant species of Coastal Saltmarsh are:

<i>Baumea juncea</i>	<i>Isolepis nodosa</i>
<i>Juncus kraussii</i>	<i>Samolus repens</i>
<i>Sarcocornia quinqueflora</i>	<i>Selliera radicans</i>
<i>Sporobolus virginicus</i>	<i>Suaeda australis</i>
<i>Triglochin striata</i>	<i>Zoysia macrantha</i>

The total list of species is larger, with many species present in low abundance or at few sites. A more extensive list of species is provided by Adam *et al.* (1988). The sediment surface may support a diversity of both micro-algae and macro-algae.

3. Communities with similar floristic composition, but with a different fauna, are found supratidally on exposed headlands (Adam *et al.* 1988). These headland communities and those of inland saline areas are not included within this Determination of the Coastal Saltmarsh Ecological Community.
4. Coastal Saltmarsh in the NSW North Coast, Sydney Basin and South East Corner Bioregions provide habitat for a diverse invertebrate fauna, which includes both marine (crabs and molluscs) and terrestrial (insects and spiders) elements. During tidal flooding a number of fish species utilise saltmarsh habitats. Grazing by macropods may occur between tidal events. Some coastal saltmarshes provide important high tide roosts for migratory wading birds, and a range of other birds also utilise coastal saltmarsh as habitat. Diversity of macrofauna in mangrove forests adjacent to saltmarsh has been found to be greater than in mangroves that do not border saltmarsh (Yerman & Ross 2004)
5. Coastal Saltmarsh in the NSW North Coast, Sydney Basin and South East Corner Bioregions is frequently found as a zone landward of mangrove stands. Occasional scattered mature *Avicennia marina* trees occur through saltmarsh at some sites, and *Avicennia* (and less frequently *Aegiceras corniculatum*) seedlings may occur throughout

- saltmarsh. In brackish areas dense stands of tall reeds (*Phragmites australis*, *Bulboschoenus* spp., *Schoenoplectus* spp., *Typha* spp.) may occur as part of the community.
6. West *et al.* (1985) estimated the total area of coastal saltmarsh in NSW was approximately 5700 hectares distributed in fragmented patches mostly less than 100 hectares. Since this estimate, further reduction and fragmentation have occurred.
  7. Species composition within Coastal Saltmarsh varies with elevation. *Sarcocornia quinqueflora* dominates at lower, and hence more frequently flooded, levels than *Sporobolus virginicus* which dominates the mid saltmarsh, while *Juncus kraussii* and *Baumea juncea* are upper saltmarsh species. There is also geographic variation, with much more extensive stands of *Sporobolus virginicus* being found in northern NSW, and conversely more extensive *Sarcocornia quinqueflora* stands in the south. Coastal Saltmarsh in southern NSW is generally more species rich than further north, with *Austrostipa stipoides*, *Gahnia filum*, *Limonium australe* and *Sclerostegia arbuscula* forming a characteristic southern suite of species. A number of other species with restricted distribution in Coastal Saltmarsh include *Distichlis distichophylla* (endangered), *Halosarcia pergranulata* subsp. *pergranulata*, *Wilsonia backhousei* (vulnerable) and *Wilsonia rotundifolia* (endangered).
  8. Saltmarshes are globally threatened, and many of the threatening processes identified by Adam (2002) operate in NSW including infilling, modified tidal flow, weed invasion, damage by domestic and feral animals, human disturbance, altered fire regimes and climate change.
  9. Historically, substantial areas of saltmarsh have been infilled for roads and aerodromes and for residential, recreational, waste disposal, industrial and agricultural purposes. With increased recognition of the ecological value of saltmarshes, the threat of further large-scale reclamation is less, but smaller scale infilling still occurs (Harty and Cheng 2003).
  10. Patterns of tidal flow have been restricted by artificial structures in many NSW saltmarshes (Williams and Watford 1997), while discharge of stormwater alters salinity regimes, increases nutrient levels and facilitates the spread of *Phragmites* and weeds.
  11. In recent decades there has been widespread invasion of saltmarsh in southeast Australia by mangroves (Mitchell and Adam 1989, Saintilan and Williams 1999, 2000). The factors driving mangrove invasion are still unclear. The mangrove invasion limits the use of saltmarshes by birds that would normally make use of this habitat and has been a factor in their decline (Saintilan 2003, Straw 1999, 2000).
  12. A large number of weed species occur in NSW saltmarshes (Adam 1981, Adam *et al.* 1988). In terms of change to the community structure and function, the most serious weed is *Juncus acutus*; other major weeds include *Baccharis halimifolia*, *Cortaderia selloana* and *Hydrocotyle bonariensis*. The upper saltmarsh zone may be dominated by introduced annuals or shortlived perennials, including *Parapholis incurva*, *Plantago coronopus* and *Polypogon monspeliensis*.
  13. Damage to saltmarshes by recreational vehicles, including four wheel drives, is widespread, and deep wheel ruts persist for many years even after exclusion of vehicles.

Use of BMX and mountain bikes is increasing, and even saltmarshes within conservation reserves have been seriously damaged (Adam 2002).

14. Grazing and trampling by domestic stock and feral herbivores occurs at a number of sites. Stock grazing has been shown to substantially change the vegetation composition and structure (Adam 1990), while on muddy substrates trampling can cause loss of plant cover and modify drainage patterns.
15. Saltmarshes have frequently been used for casual rubbish dumping and are at risk from waterborne pollution – including oil and chemical spills, both from shipping and road accidents, and catchment runoff of nutrients and agricultural chemicals.
16. Upper saltmarsh stands dominated by *Juncus kraussii* and *Baumea juncea* have high flammable fuel loads. While the natural incidence of fire in saltmarshes is likely to have been low, a number of saltmarshes have been burnt in recent years. The recovery of these sites is relatively slow and the long-term impacts of burning are uncertain.
17. Global warming and increased relative sea level are likely to pose an increasing threat to the survival of many areas of Coastal Saltmarsh (Adam 2002, Hughes 2003).
18. Coastal Saltmarsh occurs in a number of conservation reserves including the Ramsar listed sites at Towra Point and Kooragang Island Nature Reserves. Reserve status, however, does not confer protection from mangrove and weed invasion, recreational vehicles, pollution, fire or sea level rise without active management.
19. In view of the above the Scientific Committee is of the opinion that the Coastal Saltmarsh in the NSW North Coast, Sydney Basin and South East Corner Bioregions is likely to become extinct in nature in New South Wales unless the circumstances and factors threatening its survival cease to operate.

### Threatened Species Conservation Act 1995

The Scientific Committee established under the *Threatened Species Conservation Act 1995* has made a final determination to insert the following ecological community as an endangered ecological community under that Act and, as a consequence, to omit reference to the Sutherland Shire Littoral Rainforest as an endangered ecological community and, accordingly, Schedule 1 to that Act is amended:

**THREATENED SPECIES CONSERVATION ACT 1995****NSW SCIENTIFIC COMMITTEE****Final Determination**

The Scientific Committee, established by the Threatened Species Conservation Act, has made a Final Determination to list Littoral Rainforest in the NSW North Coast, Sydney Basin and South East Corner Bioregions as an ENDANGERED ECOLOGICAL COMMUNITY in Part 3 of Schedule 1 of the Act, and as a consequence, to omit reference to the Sutherland Shire Littoral Rainforest from Part 3 of Schedule 1 (Endangered Ecological Community) of the Act. Listing of endangered ecological communities is provided for by Part 2 of the Act.

The Scientific Committee has found that:

1. Littoral Rainforest in the NSW North Coast, Sydney Basin and South East Corner Bioregions is generally a closed forest, the structure and composition of which is strongly influenced by proximity to the ocean. The plant species in this ecological community are predominantly rainforest species with evergreen mesic or coriaceous leaves. Several species have compound leaves, and vines may be a major component of the canopy. These features differentiate littoral rainforest from sclerophyll forest or scrub, but while the canopy is dominated by rainforest species, scattered emergent individuals of sclerophyll species, such as *Angophora costata*, *Banksia integrifolia*, *Eucalyptus botryoides* and *E. tereticornis* occur in many stands. Littoral Rainforest in NSW is found at locations along the entire NSW Coast in the NSW North Coast Bioregion, Sydney Basin Bioregion and South East Corner Bioregion. The areas mapped for inclusion in State Environmental Planning Policy 26 Littoral Rainforest are examples of the Littoral Rainforest ecological communities, but the mapping for SEPP 26 is not exhaustive and stands of the Littoral Rainforest ecological community occur at locations not mapped under SEPP 26. Some stands may be regrowth or in the process of regenerating. The Sutherland Shire Littoral Rainforest Endangered Ecological Community which was previously listed as an endangered ecological community is included within this Community.
2. Littoral rainforest occurs on both sand dunes and on soils derived from underlying rocks (McKinley *et al.* 1999). Stands on headlands exposed to strong wind action may take the form of dense windpruned thickets (for example the Bunga Head Rainforest illustrated by Keith & Bedward 1999, or MU5 Littoral Windshear Thicket in NPWS 2002). In more sheltered sites, and in hind dunes, the community is generally taller, although still with wind pruning on the windward side of stands. Floristically there is a high degree of similarity between stands on different substrates. Most stands of Littoral Rainforest occur within 2 km of the sea, but may occasionally be found further inland, but within reach of maritime influence.
3. Littoral Rainforest comprises the *Cupaniopsis anacardioides* – *Acmena* spp. alliance of Floyd (1990). This alliance as described by Floyd includes five sub-alliances – *Syzygium luehmannii* – *Acmena hemilampra*, *Cupaniopsis anacardioides*, *Lophostemon confertus*, *Drypetes* – *Sarcomelicope* – *Cassine* – *Podocarpus* and *Acmena smithii* – *Ficus* – *Livistona* – *Podocarpus*. The distribution of some of these sub-alliances is geographically restricted – the *Syzygium luehmannii* – *Acmena hemilampra* sub-alliance is restricted to the north coast, while the most widespread sub-alliance *Acmena smithii* – *Ficus* –

*Livistona – Podocarpus* is the only one present on the coast south of Sydney. The *Lophostemon confertus* suballiance, synonymous with Forest Type 25 Headland Brush Box (Forestry Commission of NSW 1989) is restricted to exposed headlands in the North Coast Bioregion. There is considerable floristic variation between stands and in particular areas localised variants may be recognised (for example on the south coast a number of variants within the *Acmena smithii – Ficus – Livistona – Podocarpus* sub-alliance have been described, see Mills 1996, Mills & Jakeman 1995; Keith & Bedward 1999, NCC 1999, NPWS 2002). Small, depauperate stands may be difficult to assign to sub alliances. A number of species characteristic of Littoral Rainforest in NSW reach their southern limits at various places along the coast (for example *Cupaniopsis anacardioides* reaches its southern limit between Sydney and the Illawarra) but a number of temperate species are restricted to the south coast, and the total Littoral Rainforest flora declines from north to south. Those species marked ‘+’ are found in littoral rainforest north of Sydney, with some restricted to the north coast or in only a few sites south of the North Coast Bioregion. The other species are geographically more widespread.

Given the small size of many stands and the history of fragmentation, the number of characteristic species in any stand is likely to be smaller than this list. In addition, the total richness of stands declines with increasing latitude and a number of the species listed above are absent or rare in the south.

- The total species list of the community is considerably larger than that given above, with many species present in only one or two sites or in low abundance. The species composition of a site will be influenced by the size of the site, recent rainfall or drought condition and by its disturbance (including fire) history. The list of species given above is of vascular plant species, the community also includes micro-organisms, fungi, cryptogamic plants and a diverse fauna, both vertebrate and invertebrate. These components of the community are poorly documented but the assemblage in individual stands will depend on geographic location, size of stand, degree of exposure, history of disturbance and, if previously disturbed, stage of regeneration.
- Threatened species and populations for which Littoral Rainforest is known or likely habitat include:

*Acronychia littoralis*  
*Archidendron hendersonii*  
*Cynanchum elegans*  
*Fontainea oraria*

*Cryptocarya foetida*  
*Macadamia tetraphylla*  
*Hicksbeachia pinnatifolia*  
*Syzygium moorei*

<i>Senna acclinis</i>	<i>Xylosma terrae-reginae</i>
<i>Syzygium paniculatum</i>	
<i>Amaurornis olivaceus</i>	Bush-hen
<i>Coracina lineata</i>	Barred Cuckoo-shrike

<i>Monarchia leucotis</i>	White-eared Monarch
<i>Ninox strenua</i>	Powerful Owl
<i>Pandion haliaetus</i>	Osprey
<i>Ptilinopus magnificus</i>	Wompoo Fruit-dove
<i>Ptilinopus regina</i>	Rose-crowned Fruit-dove
<i>Ptilinopus superbus</i>	Superb Fruit-dove
<i>Tyto tenebricosa</i>	Sooty Owl
<i>Dasyurus maculatus</i>	Spotted-tailed Quoll

<i>Syconycteris australis</i>	Eastern Blossom Bat
<i>Thylogale stigmarica</i>	Red-legged Pademelon
<i>Coeranoscincus reticulatus</i>	Three-toed Snake-tooth Skink
<i>Hoplocephalus bitorquatus</i>	Pale-headed Snake
<i>Thersites mitchellae</i>	Mitchell's Rainforest Snail

Emu, *Dromaius novaehollandiae*, population in the NSW North Coast Bioregion and Port Stephens Local Government Area

*Menippus fugitivus* (Lea), a beetle population in the Sutherland Shire

Most of the species included in this list are found at only some sites, or vary in occurrence and abundance. As such they are not regarded as part of the characterisation of the community. Nevertheless, they are of conservation significance and need to be considered in recovery planning.

- Littoral Rainforest occurs in numerous, small stands and in total comprises less than 1% of the total area of rainforest in NSW. The largest known stand occurs in Iluka Nature Reserve, which is approximately 136 ha. Many, but not all, stands of Littoral Rainforest have been included in mapping for State Environmental Planning Policy 26 Littoral Rainforest, but degradation of the ecological community is still occurring.
- Weed species that threaten the integrity of particular stands include *Ambrosia artemisifolia*, *Anredera cordifolia*, *Arecastrum romanzoffianum*, *Asparagus* spp., *Cardiospermum grandiflorum*, *Chrysanthemoides monilifera*, *Coprosma repens*, *Ehrharta* spp., *Gloriosa superba*, *Ipomoea* spp; *Impatiens walleriana*, *Lantana camara*,

*Macfadyena unguis-cati*, *Rivina humilis*, *Pennisetum clandestinum*, *Schefflera actinophylla*, *Senna septemtrionalis*, *Solanum mauritianum* *Thunbergia alata* and *Tradescantia fluminensis*.

8. Other threats include loss of canopy integrity arising from salt and wind damage as a result of clearing or damage to stand margins; clearing of understorey (including for firewood collection); grazing and physical disturbance of understorey including by feral deer; inappropriate collection of a range of plant species (including, but not restricted to, epiphytes); fire, particularly fire incursion along boundaries: visitor disturbance including soil compaction, soil disturbance, erosion from foot, cycle, trail bike and 4 wheel drive tracks, introduction of pathogens, and disturbance from creation of new planned and unplanned tracks; increased visitation and resulting increased demand for and use of, visitor facilities such as walking tracks, viewing platforms, toilet blocks, picnic areas etc; dumping of garden waste causing weed infestation; car and other rubbish dumping. Loss of fauna due to predation by feral animals, road kill, loss of habitat and feeding resources, disturbance from human visitation (faunal elements are essential to the ecological functioning of littoral rainforest and loss, or reduction, in pollinators and seed dispersal agents will adversely affect long term vegetation health); fragmentation resulting in loss of connectivity and possibly reduced genetic exchange between populations. For stands not protected by State Environmental Planning Policy 26, clearing and development remains a possibility. (Adam 1987, 1992; Floyd 1990; Mills 1996).
9. In view of the above the Scientific Committee is of the opinion that Littoral Rainforest in the NSW North Coast, Sydney Basin and South East Corner Bioregions is likely to become extinct in nature in New South Wales unless the circumstances and factors threatening its survival or evolutionary development cease to operate.

Signed this 12th day of May 2004.

R. F. SHELDRAKE,  
Director-General

## EXPLANATORY NOTES – NATIONAL VENDOR DECLARATION (GOATS) AND WAYBILL

### Background

The National Vendor Declaration (NVD) is part of the goat industry's commitment to food safety and product integrity.

Waybills are required when goats (and other stock) are moved in the Australian Capital Territory, Northern Territory, New South Wales, Queensland and Western Australia. Only this combined NVD/waybill need be completed in these States/Territories when goats are being moved. The completion of Part D of this combined NVD/waybill is optional in those States where waybills are not required.

This document can be used as a waybill without using the NVD component, in which case Part B is not completed and the second paragraph of Part C is struck out. Standalone waybills will continue to be available from relevant regulatory authorities, and their use is preferable if only a waybill is required.

Producers are strongly encouraged to provide a copy of this document for all goats they offer for sale or slaughter, and to insist on a correctly completed copy when buying goats.

### General

Answer all items accurately. Any false, misleading or unverifiable statements may result in prosecution and/or civil action. If you rely on the document to verify future claims about purchased stock, then the stock should be identified and recorded against their accompanying document.

The cost of any residue testing required or undertaken in response to information given on the document is a commercial matter between the vendor and buyer (except where industry funds such testing).

The document is in triplicate.

The original goes with the goats to the purchaser or destination. Saleyard agents completing Part E should retain the original for 2 years (for 3 years in Western Australia) and supply a copy to any buyer on request.

The first copy goes to the person who transports the goats and completed Part B. In the Northern Territory it must be sent to the Chief Inspector of Stock, and the Australian Capital Territory it must be sent to the Controller of Stock.

The second copy stays in the book for your records and must be retained for 2 years (for 3 years in Western Australia).

### PART A

Part A is only to be completed by the owner of the goats or person responsible for the husbandry of the goats

**Address and PIC (Property Identification Code) of property/place where the journey commenced**

The address and PIC (if it is not pre-printed) of the property/place where the journey commenced must be recorded regardless of the length of time the goats have resided on the property/place. NVD/waybill forms, preprinted with a property PIC, can only be used when goats are to be moved from that property.

If the goats were walked to yards on another property exclusively for the purpose of loading at the commencement of this journey, do not record the PIC of the property on which the goats were loaded. In such instances, record the PIC of the property of last residence.

**A new NVD/waybill must be completed if the goats have been purchased and/or moved to a new property, and then dispatched to a saleyard, abattoir or other destination.**

### Property Identification Code

The Property Identification Code (PIC) is the current property number allocated to your goat producing property by the relevant State/Territory Government authority. The PIC is commonly known as the property's "tail tag number" because the same number appears on the tail tags used for the identification of cattle leaving the property. In WA the owners brand may be used instead of the PIC.

### Identification of goats

The identification of goats creates a clear linkage between the livestock and the information provided on this form. Ear tagging, ear notching, tattooing or distinctive nose or head raddles may be used for identification purposes. The application of brands to the body of goats immediately prior to dispatch is not recommended as such brands may not be completely scorable.

The goat industry is currently considering the introduction of a national livestock identification system for goats. This system should be available in the near future.

### Details of other statutory documents

Other documents relating to this movement eg. permit, animal health certificate, animal health statement, including additional sheets of descriptions of goats. The words "Attachment to NVD/Waybill serial number..." must be on every additional document with the serial number recorded. Additional document(s) must be attached to the original and both copies.

### PART B

#### Domestication Requirements (Question 2)

Animal welfare issues may arise when goats which have not been sufficiently domesticated are handled. Trapped

feral goats are not eligible for live export to Saudi Arabia. Goats for live export should be kept in holding paddocks and fed and watered from troughs prior to delivery to the feedlot.

### Veterinary drugs and chemicals (Question 3)

Detail any veterinary drugs or chemicals administered orally, by injection or to the skin, including antibiotics, vaccines, worm and externally applied insecticides, but exclude vitamin and mineral treatments.

Export Slaughter Intervals (ESIs) and Withholding Periods (WHPs) for commonly used veterinary chemicals are listed in the table to the right. ESIs are the period following treatment when goats are unsuitable for export processing. ESIs are an industry standard to ensure export requirements are met. WHPs are the periods following treatment when goats are unsuitable for processing for domestic consumption in Australia.

### Agricultural chemicals (Question 4)

This question is important to ensure that goats do not have unacceptable residues after consuming conventional stockfeeds, such as pasture, crop, stubble, grain or a prepared stockfeed, previously treated with agricultural chemicals. If the answer is "Yes" record all requested details in the space provided.

If the goats have consumed purchased feeds within 60 days prior to sale the vendor should answer "Don't know" to this question unless they hold SAFEVEAT endorsed vendor declarations for that feed and those declarations confirm that all required WHPs have been met and/or that the feed complies with all requirements relating to chemical residues through a QA testing program.

If any of the goats consumed pasture, stubbles or failed crops previously treated with a chemical that had no grazing/todder WHP on the label the question should be answered "Yes" and details provided.

### Feeding restrictions (Question 5)

The NVD includes a manager's declaration that the goats described have not been fed contrary to the law. State law prohibits feeding of most animal materials to ruminants.

Animal materials include any tissue, blood or other material taken from an animal and any meals derived from animals. Examples are meat and bone meals, blood meal, fish meal, feather meal, etc. It does not include tallow, gelatin or milk products. Contact your State Agriculture/Primary Industries Department for more details on these feeding restrictions.

Some overseas customers also require that the goat meat and offal they receive be sourced from goats that have never in their lives been fed animal material such as meat and bone meal as well as animal fat such as tallow which may be included in supplementary feed materials.

### Additional information (Question 6)

List any required attached documents, and attach copies of the documents to the original and all copies of the declaration.

### PART C

Signing Part C has legal significance. Regulatory authorities may take legal action, and purchasers may seek damages if any information in Parts A and B is incorrect. Before signing you must be absolutely satisfied you understand all elements of the document, and these explanatory notes.

If the person signing the document has not been responsible for the husbandry of the animals, the second paragraph of Part C must be struck out and the document will not be a NVD.

Livestock agents in particular are advised that unless they are directly responsible for the husbandry of the goats they must not sign unless the second paragraph has been struck out.

### PART D

The carrier, including the driver, must complete this part and sign it. When more than one truck is carrying the goats all vehicle registration numbers are to be recorded. If there is insufficient space to record all the vehicle registration numbers an additional document must be attached to the original and all copies. Some state regulatory authorities will require a copy of the NVD to travel with each individual vehicle. If any information is incorrect regulatory authorities may take legal action. Completion of this part is optional within South Australia, Tasmania and Victoria.

  - (d) To encourage consolidation of existing properties that have narrow allotment frontages in order to facilitate effective redevelopment.
  - (e) To ensure that the future redevelopment potential of any existing property is not unreasonably compromised due to narrowness of the frontage.

The Council is not to grant consent for the erection of any new building or an addition to any existing building where the number of storeys, or the maximum height of external walls, or the maximum height of the building, would be greater than the limits that are specified by the Table below according to the relevant allotment frontage and the area of the development site.

**Table**

Site frontage	Site area	Maximum number of storeys	Maximum height for external walls	Maximum height for the building
Less than 20m	Less than 2000m <sup>2</sup>	3 storeys	10.0m	11.5m

The outdoor space must be comprised of:
    - (i) alleyways that are open to the sky above and link existing laneways or streets, or
    - (iii) courtyards that are open to the sky above and receive satisfactory levels of midwinter sunlight.
  - (b) the gross floor area of the fifth storey does not exceed 25% of the development site's area.
- (10) The objectives for setbacks from Hudson Lane are as follows:
- (a) To enhance the environmental amenity of Hudson Lane as the prerequisite of enhanced pedestrian and retail activity.

  - (c) To accommodate pedestrian forecourts or terraces facing Hudson Lane in association with all shopfronts that are suitable for outdoor dining.
  - (d) To establish a minimum separation between buildings situated on opposing sides of Hudson Lane in order to provide for satisfactory levels of residential amenity.
- (11) The development standard for setbacks from Hudson Lane in the Terrigal Town Centre is as follows.

Except in the cases of corner allotments facing either Kurrawyba Avenue or Church Street, the Council is not to grant consent for the erection of any new building, or for an addition to any existing building, fronting onto Hudson Lane unless the exterior walls of the building are setback at least 3 metres from the frontage to Hudson Lane.
