Part 4 Minimum and maximum shareholdings

7 Minimum shareholding

(1) For the purpose of section 67 (1) of the Act, the minimum shareholding in relation to a class of shares specified in the Table to this clause is, subject to subclause (2), the number of shares of that class specified in the Table next to the class concerned.

Note. A person who does not hold the minimum shareholding required for a class of shares will not be eligible to be given, or to nominate another person to be given, an endorsement that authorises the taking of fish in respect of shares of that class. See sections 68 (3) (b) and 69 (2) of the Act.

(2) The minimum shareholding in relation to a class of shares is, if the shareholder is an original entitlement holder in relation to that class of shares, 1 share of that class.

(3) Subclause (2) ceases to apply in respect of a class of shares held by a shareholder if the shareholder transfers, assigns, forfeits or surrenders any shares of that class after the commencement of this Plan (in which case subclause (1) applies to the shareholder).

Fisheries Management (Estuary General Share Management Plan)
Regulation 2006

Appendix

-
- (4) For the purposes of this clause, an *original entitlement holder*, in relation to a class of shares, is a person who:
- (a) held shares of that class immediately before the commencement of this Plan, and
 - (b) was, immediately before the commencement of this Plan, eligible for an endorsement in the fishery (or to nominate a person to be given an endorsement in the fishery) on the basis of that shareholding.
- (5) A person who is issued with shares of a class as a consequence of a decision of the Share Appeal Panel on an appeal in relation to the issue of shares in the fishery and who would have been entitled to an endorsement in the fishery, or to nominate a person to be given an endorsement, if those shares had been issued before the commencement of this Plan, is taken to be an original entitlement holder in relation to that class of shares.
- (6) The shares relied on to meet the minimum shareholding requirement must all be a component of the same estuary general fishing business.

Part 5 Endorsement conditions

9 Use of traps and nets by trapping endorsement holders

- (1) This clause applies if a person holds a trapping endorsement (but not a mud crab trapping endorsement or eel trapping endorsement).
- (2) For the purposes of section 68 (6A) of the Act, it is a condition of a trapping endorsement that the fisher taking fish under the endorsement does not set or use a fish trap or hoop or lift net (or both) in any waters in contravention of this clause.
- (3) A fisher must not set or use in the waters of Wallis Lake Broadwater or Port Stephens Broadwater (or both) at any one time:
 - (a) a total of more than 20 fish traps, or
 - (b) a total of more than 10 hoop or lift nets.
- (4) A fisher must not set or use in any other waters at any one time:
 - (a) a total of more than 10 fish traps, or
 - (b) a total of more than 10 hoop or lift nets.
- (5) Without affecting subclauses (3) and (4), if fish traps or hoop or lift nets (or both) are set or used by a fisher in the waters of Wallis Lake Broadwater or Port Stephens Broadwater (or both) and in other waters, the fisher must not set or use at any one time:
 - (a) a total of more than 20 fish traps, or
 - (b) a total of more than 10 hoop or lift nets.

- (1) This clause applies if a person holds a mud crab trapping endorsement (but not a trapping endorsement).
- (2) For the purposes of section 68 (6A) of the Act, it is a condition of a mud crab trapping endorsement that the fisher taking fish under the endorsement does not set or use a crab trap or hoop or lift net (or both) in any waters in contravention of this clause.

Fisheries Management (Estuary General Share Management Plan)

-
- (3) A fisher must not set or use in any waters at any one time:
- (a) a total of more than 10 crab traps, or
 - (b) a total of more than 10 hoop or lift nets.
- (4) In addition, a fisher must not set or use in any waters at any one time a combined total of crab traps and hoop or lift nets that exceeds 10. Accordingly, for every one crab trap the fisher sets or uses, the maximum number of hoop or lift nets he or she is permitted to use at the same time is reduced by one.

Note 1. Accordingly, a fisher who uses 1 crab trap is permitted to use only 9 hoop or lift nets, a fisher who uses 2 crab traps is permitted to use only 8 hoop or lift nets, a fisher who uses 3 crab traps is permitted to use only 7 hoop or lift nets, and so on.

Note 2. See also clauses 48, 59 and 61 of the *Fisheries Management (General) Regulation 2002*. Any breach of those clauses is an offence under section 24 of the Act.

11 Use of traps and nets by dual endorsement holders

- (1) This clause applies if a person holds both a trapping endorsement and a mud crab trapping endorsement.
- (2) For the purposes of section 68 (6A) of the Act, it is a condition of a trapping endorsement and a mud crab trapping endorsement that the fisher taking fish under the endorsements does not set or use a fish trap, hoop or lift net or crab trap (or any combination of those traps and nets) in any waters in contravention of this clause.
- (3) A fisher must not set or use in the waters of Wallis Lake Broadwater or Port Stephens Broadwater (or both) at any one time:
 - (a) a total of more than 20 fish traps, or
 - (b) a total of more than 20 hoop or lift nets, or
 - (c) a total of more than 10 crab traps.
- (4) A fisher must not set or use in any other waters at any one time:
 - (a) a total of more than 10 fish traps, or
 - (b) a total of more than 20 hoop or lift nets, or

 - (a) a total of more than 20 fish traps, or
 - (b) a total of more than 20 hoop or lift nets, or

Fisheries Management (Estuary General Share Management Plan)
Regulation 2006

Appendix

-
- (c) a total of more than 10 crab traps.
- (6) In addition, a fisher must not set or use in any waters, at any one time, a combined total of crab traps and hoop or lift nets that exceeds 20. Accordingly, for every one crab trap the fisher sets or uses, the maximum number of hoop or lift nets he or she is permitted to use at the same time is reduced by one.

Note 1. Accordingly, a fisher who uses 1 crab trap is permitted to use only 19 hoop or lift nets, a fisher who uses 2 crab traps is permitted to use only 18 hoop or lift nets, a fisher who uses 3 crab traps is permitted to use only 17 hoop or lift nets, and so on. A fisher who uses the maximum number of crab traps he or she is permitted to use (that is, 10 crab traps) is permitted to use only 10 hoop or lift nets.

Note 2. See also clauses 48, 59 and 61 of the *Fisheries Management (General) Regulation 2002*. Any breach of those clauses is an offence under section 24 of the Act.

12 No more than one net to be used by holders of hauling endorsement

- (1) For the purposes of section 68 (6A) of the Act, it is a condition of a category one hauling endorsement that the holder of the endorsement does not use or cause to be used more than one of the nets that the holder is authorised to use in the fishery by the endorsement at any one time.
- (2) For the purposes of section 68 (6A) of the Act, it is a condition of a category two hauling endorsement that the holder of the endorsement does not use or cause to be used more than one of the nets that the holder is authorised to use in the fishery by the endorsement at any one time.

13 Boat capacity restrictions

- (1) For the purposes of section 68 (6A) of the Act, it is a condition of an endorsement that the endorsement holder does not use a boat to take fish in the fishery if it has a length exceeding the maximum boat length specified in Column 1 of the Table to this clause.

Table

Column 1	Column 2
Maximum boat length	Exemption code
10 metres	EG

- (2) Subclause (1) does not apply in respect of an original boat if:
- (a) it is exempted from the maximum boat length requirement in accordance with an exemption criteria determined by the Director-General, and

Fisheries Management (Estuary General Share Management Plan)
Regulation 2006

Appendix

- (b) that exemption is noted on the fishing boat licence for the boat by the Minister using a code of a kind specified in Column 2 of the Table to this clause.
- (3) In this clause, an *original boat* means a boat that, immediately before the commencement of this Plan, was a component of an estuary general fishing business.
- (4) For the purposes of this clause, the length of a boat is the length noted on the fishing boat licence for that boat.

14 Taking fish with the assistance of other persons

- (1) For the purposes of section 68 (6A) of the Act, it is a condition of an endorsement that the endorsement holder does not take fish in the fishery with the assistance of any person, other than a person who holds the same type of endorsement to take fish as the endorsement holder.
- (2) This clause does not apply to the taking of fish in the fishery by use of a seine net (prawns).

Part 6 Species that may be taken

15 Only permitted species may be taken

For the purposes of section 68 (6A) of the Act, it is a condition of an endorsement that the endorsement holder does not take fish by use of a net, trap or line or by the method of hand picking in the fishery unless the fish taken is a permitted species for the fishery.

Note. Size requirements for permitted species are set out in the *Fisheries Management (General) Regulation 2002*.

Fisheries Management Act 1994

Her Excellency the Governor, with the advice of the Executive Council, has made the following Regulation under the *Fisheries Management Act 1994*.

IAN MACDONALD, M.L.C.,
Minister for Primary Industries

Explanatory note

The object of this Regulation is to give effect to a share management plan for the estuary prawn trawl share management fishery.

The share management plan provides for the following matters:

- (a) objectives of the plan,
- (b) description of the fishery,
- (c) minimum and maximum shareholdings,
- (d) species that may be taken,

Part 4 Minimum and maximum shareholdings

7 Minimum shareholding

(1) For the purpose of section 67 (1) of the Act, the minimum shareholding in relation to a class of shares specified in the Table to this clause is, subject to subclause (2), the number of shares of that class specified in the Table next to the class concerned.

Note. A person who does not hold the minimum shareholding required for a class of shares will not be eligible to be given, or to nominate another person to be given, an endorsement that authorises the taking of fish in respect of shares of that class. See sections 68 (3) (b) and 69 (2) of the Act.

(2) The minimum shareholding in relation to a class of shares is, if the shareholder is an original entitlement holder in relation to that class of shares, 1 share of that class.

(3) Subclause (2) ceases to apply in respect of a class of shares held by a shareholder if the shareholder transfers, assigns, forfeits or surrenders any shares of that class after the commencement of this Plan (in which case subclause (1) applies to the shareholder).

(4) For the purposes of this clause, an *original entitlement holder*, in relation to a class of shares, is a person who:

- (a) held shares of that class immediately before the commencement of this Plan, and

Fisheries Management (Ocean Hauling Share Management Plan)
Regulation 2006

Appendix

-
- (b) was, immediately before the commencement of this Plan, eligible for an endorsement in the fishery (or to nominate a person to be given an endorsement in the fishery) on the basis of that shareholding.
- (5) A person who is issued with shares of a class as a consequence of a decision of the Share Appeal Panel on an appeal in relation to the issue of shares in the fishery and who would have been entitled to an endorsement in the fishery, or to nominate a person to be given an endorsement, if those shares had been issued before the commencement of this Plan, is taken to be an original entitlement holder in relation to that class of shares.
- (6) The shares relied on to meet the minimum shareholding requirement must all be a component of the same ocean hauling fishing business.

Table

Class of shares	Minimum shareholding
Ocean hauling—general ocean hauling shares (Region 1, 2, 3, 4, 5, 6 or 7)	40
Ocean hauling—hauling net (general purpose) shares (Region 1, 2, 3, 4, 5, 6 or 7)	40
Ocean hauling—garfish net (hauling) shares (Region 1 or 2)	10
Ocean hauling—garfish net (hauling) shares (Region 3, 4, 5, 6 or 7)	40
Ocean hauling—pilchard, anchovy and bait net (hauling) shares (Region 1, 2, 3, 4, 5, 6 or 7)	30
Ocean hauling—purse seine net shares	40

8 Maximum shareholding

For the purpose of section 72 (1) of the Act, the maximum shareholding is 40% of the total number of shares in the fishery at the commencement of this Plan.

- (2) The declaration under subclause (1) does not prohibit the use of any of the following nets, where those nets are cast from and hauled back to a boat, in waters that are adjacent to a headland that is at the end of a beach specified in Schedule 1:
 - (a) garfish net (hauling),

Fisheries Management (Ocean Hauling Share Management Plan)
Regulation 2006

Pursuant to section 20 (2) of the Act, it is declared that the beaches specified in Column 1 of Schedule 2 are waters in which the class of commercial fishing that consists of the taking of fish by commercial fishers in the fishery is prohibited, during the period specified next to the beach concerned in Column 2 of the Schedule.

Note. See the Supporting Plan for section 20 (2) closures that apply to more than one share management fishery.

12 Hauling net (general purpose) and pilchard, anchovy and bait net (hauling) restrictions

(1) For the purposes of section 68 (6A) of the Act, it is a condition of an endorsement that the endorsement holder does not carry out ocean hauling operations (other than operations in relation to use of a garfish net (hauling)) on weekends or on public holidays during the months of November, December, January and February.

15 Evidence of endorsement must be produced where fishing priority sought

- (1) If an endorsement holder seeks to take priority over another fisher in ocean hauling operations in the fishery, including by taking a turn before that other fisher, the other fisher may request the endorsement holder seeking to take priority, before taking that turn, to produce evidence of his or her endorsement in the fishery to that other fisher.
- (2) The endorsement holder seeking to take priority may, before responding to such a request, require the fisher making the request to produce evidence of his or her endorsement in the fishery to the endorsement holder seeking priority.
- (3) For the purposes of section 68 (6A) of the Act, it is a condition of an endorsement that an endorsement holder must not fail to comply with any reasonable request to produce evidence of an endorsement made in accordance with this clause.

Note. Clauses 83 and 84 of the *Fisheries Management (General) Regulation 2002* set out the general rules for rights of priority between fishers setting or hauling nets in the fishery.

16 Display of identification information on motor vehicles

- (1) For the purposes of section 68 (6A) of the Act, it is a condition of an endorsement that the endorsement holder does not engage in any ocean hauling operations unless there is clearly displayed on any motor vehicle used in connection with the operations the following information:
- (a) the words "Ocean hauling fishery",
- (b) the number of the fishing business of which the endorsement is a component (being the number allocated to the fishing business by the Director-General under the Act).
- (2) If a motor vehicle is being used by more than one endorsement holder, it is sufficient that the information referred to in subclause (1) is displayed as required in relation to only one of those endorsement holders.

- (2) In this clause:
flagged swimming area means any part of a beach used as a swimming area, the boundaries of which are indicated by flags.

18 Boat capacity restrictions

- (1) For the purposes of section 68 (6A) of the Act, it is a condition of an endorsement of a type specified in Column 1 of the Table to this clause that the endorsement holder does not use a boat to take fish in the fishery if the boat has a length exceeding the maximum boat length specified in Column 2 of the Table next to the endorsement concerned.

Table

Column 1	Column 2	Column 3
Types of endorsement	Maximum boat length	Exemption code
Hauling net (general purpose) endorsement	6 metres	N/A
Garfish net (hauling) endorsement, pilchard, anchovy and bait net (hauling) endorsement, and purse seine net endorsement	20 metres	OH

-
- (c) the use of a danish seine trawl net (fish) to take fish from ocean waters that are north of a line drawn due east from Barrenjoey Headland (other than any waters in which use of an otter trawl net (fish) is prohibited under the regulations).

4 Classes of share

There are 4 classes of share available in the fishery, being the following classes:

- (a) Ocean trawl—inshore prawn shares,
- (b) Ocean trawl—offshore prawn shares,
- (c) Ocean trawl—deepwater prawn shares,

- (a) Inshore prawn endorsement,
 - (b) Offshore prawn endorsement,
 - (c) Deepwater prawn endorsement,
 - (d) Fish northern zone endorsement.

(2) **Inshore prawn endorsement**

An inshore prawn endorsement authorises the holder to take fish using an otter trawl net (prawns) from inshore waters.

- (3) Only shareholders who hold ocean trawl—inshore prawn shares are eligible to be given, or to nominate a person to be given, an inshore prawn endorsement.

(4) **Offshore prawn endorsement**

An offshore prawn endorsement authorises the holder to take fish using an otter trawl net (prawns) from offshore waters that are west of the 280 metre (150 fathom) depth contour.

- (5) Only shareholders who hold ocean trawl—offshore prawn shares are eligible to be given, or to nominate a person to be given, an offshore prawn endorsement.

(6) **Deepwater prawn endorsement**

A deepwater prawn endorsement authorises the holder to take fish using an otter trawl net (prawns) from offshore waters that are east of the 280 metre (150 fathom) depth contour.

Part 4 Minimum and maximum shareholdings

6 Minimum shareholding

- (1) For the purpose of section 67 (1) of the Act, the minimum shareholding in relation to a class of shares specified in the Table to this clause is, subject to subclause (2), the number of shares of that class specified in the Table next to the class concerned.
Note. A person who does not hold the minimum shareholding required for a class of shares will not be eligible to be given, or to nominate another person to be given, an endorsement that authorises the taking of fish in respect of shares of that class. See sections 68 (3) (b) and 69 (2) of the Act.
- (2) During the transitional period, the minimum shareholding in relation to a class of shares is, if the shareholder is an original entitlement holder in relation to that class of shares, 1 share of that class.
- (3) Subclause (2) ceases to apply in respect of a class of shares held by a shareholder if, after the commencement of this Plan and before the end of the transitional period, the shareholder transfers, assigns, forfeits or surrenders any shares of that class (in which case subclause (1) applies to the shareholder).
- (4) For the purposes of this clause, an *original entitlement holder*, in relation to a class of shares, is a person who:
 - (a) held shares of that class immediately before the commencement of this Plan, and
 - (b) was, immediately before the commencement of this Plan, eligible for an endorsement in the fishery (or to nominate a person to be given an endorsement in the fishery) on the basis of that shareholding.

Fisheries Management (Ocean Trawl Share Management Plan)
Regulation 2006

Appendix

-
- (5) At the end of the transitional period, the minimum shareholding requirements under subclause (1) apply to all shareholders in the fishery.
- (6) For the purposes of this clause, the *transitional period* is the period of 2 years and 6 months commencing on the commencement of this Plan.
- (7) A person who is issued with shares of a class as a consequence of a decision of the Share Appeal Panel on an appeal in relation to the issue of shares in the fishery and who would have been entitled to an endorsement in the fishery, or to nominate a person to be given an endorsement, if those shares had been issued before the commencement of this Plan, is taken to be an original entitlement holder in relation to that class of shares.
- (8) The shares relied on to meet the minimum shareholding requirement must all be a component of the same ocean trawl fishing business.

Table

Class of shares	Minimum shareholding
Ocean trawl—inshore prawn shares	32
Ocean trawl—offshore prawn shares	32
Ocean trawl—deepwater prawn shares	20
Ocean trawl—fish northern zone shares	32

7 Maximum shareholding

For the purpose of section 72 (1) of the Act, the maximum shareholding is 40% of the total number of shares in the fishery at the commencement of this Plan.

Part 5 General requirements in relation to taking fish

8 Waters closed to ocean trawling

Pursuant to section 20 (2) of the Act, it is declared that the waters specified in Column 1 of Schedule 2 are waters in which the class of commercial fishing that consists of the taking of fish by commercial fishers by use of the net specified next to those waters in Column 2 of the Schedule is prohibited, during the period specified in relation to those waters in Column 3 of the Schedule.

Note. See the Supporting Plan for section 20 (2) closures that apply to more than one share management fishery.

9 Boat capacity restrictions

- (1) For the purposes of section 68 (6A) of the Act, it is a condition of an endorsement that the endorsement holder does not use a boat to take fish in the fishery if the boat:
- (a) has a length exceeding the maximum boat length specified in Column 1 of the Table to this clause, or
 - (b) has an engine with a continuous rating in excess of 300kW (being the rating for the boat as published by the manufacturer of the engine).

Table

Column 1	Column 2
Maximum boat length	Exemption code
20 metres	OT

- (2) Subclause (1) does not apply in respect of an original boat if:
- (a) it is exempted from the maximum boat length requirement in accordance with an exemption criteria determined by the Director-General, and
 - (b) that exemption is noted on the fishing boat licence for the boat by the Minister using a code of a kind specified in Column 2 of the Table to this clause.
- (3) In this clause, an *original boat* means a boat that, immediately before the commencement of this Plan, was a component of an ocean trawl fishing business.
- (4) For the purposes of this clause, the length of a boat is the length noted on the fishing boat licence for that boat.

10 Boat restrictions—offshore prawn endorsement

For the purposes of section 68 (6A) of the Act, it is a condition of an offshore prawn endorsement that the endorsement holder does not use a boat to take fish pursuant to that endorsement unless the fishing boat licence for the boat indicates the maximum units allocated by the Director-General to the boat in respect of the boat's hull, engine power and head rope length.

- (8) The shares relied on to meet the minimum shareholding requirement must all be a component of the same ocean trap and line fishing business.

Table

Class of shares	Minimum shareholding
Ocean trap and line—line fishing western zone shares	40
Ocean trap and line—line fishing eastern zone shares	40
Ocean trap and line—demersal fish trap shares	40
Ocean trap and line—school and gummy shark shares	40

Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

under the

Environmental Planning and Assessment Act 1979

I, the Minister for Planning, make the following local environmental plan under the
Environmental Planning and Assessment Act 1979. (P01/00453/S69)

FRANK SARTOR, M.P.,
Minister for Planning

Clause 1 Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

1 Name of plan

This plan is *Blue Mountains Local Environmental Plan 1991 (Amendment No 31)*.

2 Aims of plan

This plan aims to clarify and update Schedule 3 (Environmentally sensitive vegetation units) to *Blue Mountains Local Environmental Plan 1991*.

3 Land to which plan applies

This plan applies to land within the City of Blue Mountains to which *Blue Mountains Local Environmental Plan 1991* applies.

4 Amendment of Blue Mountains Local Environmental Plan 1991

Blue Mountains Local Environmental Plan 1991 is amended as set out in Schedule 1.

Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

Amendment

Schedule 1

Schedule 1 Amendment

(Clause 4)

Schedule 3

Omit the Schedule. Insert instead:

Schedule 3 Environmentally sensitive vegetation units

Note. This Schedule refers to Clause 10.

Note. In this Schedule, some scientific names appear in either italics or bold and italics. Bold italics are used to denote rare, endangered or dominant species.

Environmentally sensitive vegetation units (that is, significant vegetation communities), for the purposes of this plan, consist of the following naturally occurring plant communities in the City of Blue Mountains Council area. These communities are based not only on the plant species composition, but also upon specific topographic and edaphic (soil) qualities that make vegetation habitats important. The structural formation of the plant communities follows the classification of Specht *et al.* (1974), cited in clause 8 (References) of this Schedule. Descriptions of the vegetation communities in this Schedule have, in part, been adapted from Keith and Benson (1988), Smith and Smith (1998) and Douglas (2001), also cited in clause 8.

1 Tall Closed-forest/Closed-forest/Low Closed-forest (Rainforest)

(1A) *Ceratopetalum apetalum*-*Doryphora sassafras* Rainforest

Ceratopetalum apetalum-*Doryphora sassafras* (Coachwood-Sassafras) Rainforest is found on sedimentary geology at upper and middle altitudes in the Blue Mountains. A variant, the 'Montane Rainforest' also occurs on more fertile soils on the slopes of the basalt-capped mountains in the far north of the City. The rainforest on basalt can be very similar both structurally and floristically to rainforest on sedimentary rock where there is significant influence from alluvium derived from the basalt up-slope. As the basalt influence decreases and

Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

Schedule 1 Amendment

the sedimentary rock becomes more prominent due to erosion, the structure and floristics blend into typical Sydney Sandstone Gallery Rainforest, which tends to be less diverse than rainforest on basalt, particularly in the understorey.

These rainforest communities are replaced at lower altitudes by *Backhousia myrtifolia*-*Ceratopetalum apetalum* rainforest (described below). The upper and lower altitude communities intergrade in the Springwood area. *Ceratopetalum apetalum*-*Doryphora sassafras* rainforest occurs in sheltered, moist sites that are rarely, if ever, burnt.

The dominant tree species is usually *Ceratopetalum apetalum* (Coachwood) and/or *Doryphora sassafras* (Sassafras). Other trees that are common in some stands are *Acacia elata* (Mountain Cedar Wattle), *Acmena smithii* (Lilly Pilly), *Callicoma serratifolia* (Black Wattle), *Hedycarya angustifolia* (Native Mulberry) and *Quintinia sieberi* (Possumwood). *Backhousia myrtifolia* (Grey Myrtle) is usually absent, although sometimes a minor component of the community. The vegetation structure is usually a closed-forest or low closed-forest. There may be a layer of emergent eucalypts above the rainforest canopy in ecotonal or partly disturbed communities. Ferns, vines and epiphytes are usually prominent features of the community.

This community is generally characterised by the occurrence of *Ceratopetalum apetalum* or *Doryphora sassafras* with the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition of the vegetation.

<i>Acacia elata</i>	<i>Acmena smithii</i>	<i>Asplenium australasicum</i>
<i>Asplenium flabellifolium</i>	<i>Blechnum ambiguum</i>	<i>Blechnum cartilagineum</i>

Backhousia myrtifolia-Ceratopetalum apetalum (Myrtle-Coachwood) Rainforest refers to the community found on sedimentary geology at lower altitudes in the Blue Mountains. It is replaced at middle and upper altitudes by *Ceratopetalum apetalum-Doryphora sassafras* Rainforest. The two communities intergrade in the Springwood area. *Backhousia myrtifolia-Ceratopetalum apetalum* Rainforest occurs on relatively fertile soils in sheltered, moist sites that are rarely, if ever, burnt.

Backhousia myrtifolia (Grey Myrtle) is the dominant or co-dominant tree with *Ceratopetalum apetalum* (Coachwood) or *Acmena smithii* (Lilly Pilly) or both. Other trees that may be common are *Acacia elata* (Mountain Cedar Wattle), *Callicoma serratifolia* (Black Wattle) and *Syncarpia glomulifera* (Turpentine). *Doryphora sassafras* (Sassafras) is often present, but not as a dominant. The vegetation structure is usually a closed-forest or low closed-forest. There may be a layer of emergent eucalypts above the dense rainforest canopy in ecotonal or partly disturbed communities. Ferns, vines and epiphytes are usually prominent features of the community.

(1C) Megalong Granite Dry Rainforest (*Backhousia myrtifolia*)

Within the southern parts of the Blue Mountains in the Megalong Valley are a few small remnants of granite dry rainforest. These communities are generally confined to narrow strips occurring in south-facing rocky slopes and gullies that have survived clearing and where grazing by livestock is minimal. It is evident that the dry rainforest on the granite is strongly allied with that in the Kowmung Wilderness on the Lambie Group.

The dominant species in this community is *Backhousia myrtifolia* (Myrtle) that occurs as a tall closed-scrub or low closed-forest. Infrequent emergents are mainly *Eucalyptus tereticornis* (Forest Red Gum) or *Brachychiton populneus* (Kurrajong). The small tree *Rapanea howittiana* (Brush Muttonwood) may also occur and it is likely that the larger or more protected sites also support *Toona australis* (Red Cedar). This community may grade into the Riparian Granite Slope Forest (see community (2O)).

The understorey is dominated by ferns and scattered herbs. Species include the ferns *Pellaea falcata* var. *falcata*, *P. falcata* var. *nana* and *Adiantum aethiopicum*, the vines *Aphanopetalum resinum* and *Marsdenia flavescens*, the herbs *Parietaria debilis*, *Hydrocotyle geraniifolia*, *Sigesbeckia orientalis* and *Plectranthus parviflorus*, the grass *Oplismenus aemulus* and possibly *Ehretia acuminata*.

This community is generally characterised by the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition of the vegetation.

2 Tall open-forest/open-forest**(2A) Moist Basalt Cap Forest (*Eucalyptus viminalis*-*E. blaxlandii*-*E. radiata* subsp. *radiata*)**

The basalt caps of Mt. Wilson, Mt. Tomah, Mt. Bell, Mt. Banks, Mt. Caley and Mt. Hay have weathered to a fertile clay-loam soil. At high altitudes (800–1,000 metres), the summits and slopes of these areas support a tall open-forest variously dominated by *Eucalyptus viminalis* (Ribbon Gum), *E. blaxlandii* (Brown Stringybark) and *E. radiata* subsp. *radiata* (Narrow-leaved Peppermint). Other canopy species that may be encountered include *E. cypellocarpa* (Monkey Gum), *E. oreades* (Blue Mountain Ash) and *E. fastigata* (Brown Barrel).

The understorey of the Moist Basalt Cap Forest generally has scattered shrubs including *Acacia melanoxylon*,

(2B) Blue Mountains Shale Cap Forest (Eucalyptus deanei-E. punctata-Syncarpia glomulifera)

This community includes the Blue Mountains Shale Cap Forest that is listed as an endangered ecological community in Part 3 of Schedule 1 to the *Threatened Species Conservation Act 1995*.

Eucalyptus deanei-E. punctata-Syncarpia glomulifera open to tall open-forest incorporates the vegetation communities found on deep, shale-rich soils on ridges and upper slopes. Within the City, such vegetation occurs only in the lower altitudes whereas it extends to the higher altitudes in the adjoining Hawkesbury City.

Within the City, this community is characterised by *Eucalyptus deanei* (Mountain Blue Gum), which is dominant or co-dominant with *E. punctata* (Grey Gum) *Syncarpia glomulifera* (Turpentine). The form of Blue Mountains Shale Cap Forest that occurs within the City is distinguished from the closely related Sydney Turpentine Ironbark Forest by the presence of *E. notabilis* (Mountain Mahogany).

Other tree species that may be present include *Angophora costata* (Sydney Red Gum), *A. floribunda* (Rough-barked Apple), *Eucalyptus piperita* (Sydney Peppermint) and *E. punctata* (Grey Gum). *E. piperita* is associated with the edge of this community and a relatively low influence from the shale. The typical vegetation structure is tall open-forest, although this may vary depending on site conditions and history. It is generally a wet sclerophyll forest, with soft-leaved plants prominent in the understorey.

This community is generally characterised by the occurrence of *Eucalyptus deanei*, *E. punctata* and *Syncarpia glomulifera* along with the following assemblage of native plant species. Other species also occur, and not all of the following species

(2C) Sydney Turpentine-Ironbark Forest (Syncarpia glomulifera-Eucalyptus fibrosa-E. crebra)

Sydney Turpentine-Ironbark Forest listed as an endangered ecological community in Part 3 of Schedule 1 to the *Threatened Species Conservation Act 1995*.

Within the City, this community represents a drier and generally lower altitude variant of the Blue Mountains Shale Cap Forest. The primary difference is the general absence of *Eucalyptus deanei* and *E. notabilis* and the usual dominance of *Syncarpia glomulifera* (Turpentine), sometimes along with various ironbark species such as *E. fibrosa* (Broad-leaved Ironbark), *E. crebra* (Narrow-leaved Ironbark), and *E. beyeriana* (Beyer's Ironbark). The ironbarks can be absent or rare due to their extensive logging for fencing purposes. *E. punctata* (Grey Gum), *E. notabilis* (Mountain Mahogany), *E. paniculata* (Grey Ironbark), *E. globoidea* (White Stringybark) and *E. eugenioides* (Thin-leaved Stringybark) may also be present.

Schedule 1

The original distribution of this community and the boundary between it and the Blue Mountains Shale Cap Forest is unclear due to extensive clearing or modification of these vegetation types. The two communities are closely related and may intergrade extensively. In addition, this community intergrades with Shale/Sandstone Complex Forest (described below).

Sydney Turpentine-Ironbark Forest occurs on ridgetop caps of Wianamatta Shale. It may extend onto deeper areas of Hawkesbury Shale within the so-called Mittagong Formation.

Sydney Turpentine Ironbark Forest is characterised in the Blue Mountains by the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition of the vegetation.

<i>Acacia decurrens</i>	<i>Acacia falcata</i>	<i>Acacia implexa</i>
<i>Acacia longifolia</i>	<i>Acacia parramattensis</i>	<i>Allocasuarina torulosa</i>

(2D) Shale Sandstone Transition Forest (Syncarpia glomulifera-Eucalyptus punctata)

Shale Sandstone Transition Forest is listed as an endangered ecological community in Part 3 of Schedule 1 to the *Threatened Species Conservation Act 1995*. Within the City, Shale Sandstone Transition Forest is within the scope of, but not limited by the definition of Shale Sandstone Transition Forest in the Final Determination of the Scientific Committee to list the ecological community in Schedule 1 to the *Threatened Species Conservation Act 1995*.

This community is present primarily on ridgetops but may occur elsewhere on unmapped remnant shale caps or lenses or immediately downslope of shale caps where the soils have been enriched by colluvium. Within the City, it is restricted to the lower altitudes and transitions between or within the Wianamatta and Hawkesbury Group of sediments.

Because it represents a transition from shale-based vegetation to that associated with sandstone environments, this community is inherently highly variable and difficult to define. Variations occur depending on the relative influence of the different geologies as well as due to differences in shelter and rainfall. Any vegetation that is associated with a transition from shale to sandstone is considered to be within the scope of this community, irrespective of the structure or floristics unless it

Amendment

Schedule 1

can be shown to be part of another vegetation type described in this Schedule.

The Shale Sandstone Transition Forest can have considerable affinities to Sydney Turpentine-Ironbark Forest but generally has a greater influence from sandstone-oriented species and less influence from those more affiliated with shale soils. Tree species that can occur in this Complex include *Syncarpia glomulifera* (Turpentine), *Eucalyptus punctata* (Grey Gum), *E. resinifera* (Red Mahogany), *E. notabilis* (Mountain Mahogany), *E. crebra* (Narrow-leaved Ironbark), *E. fibrosa* (Broad-leaved Ironbark), *E. paniculata* (Grey Ironbark), *E. beyeriana* (Beyer's Ironbark), *E. globoidea* (White Stringybark), *E. sparsifolia* (Narrow-leaved Stringybark), *E. eugenioides* (Thin-leaved Stringybark) and *Angophora costata* (Sydney Red Gum). The stringybarks *E. eugenioides* and *E. sparsifolia* are generally diagnostic of the more sandstone-influence form of this community.

The understorey can be highly variable depending on the extent of shale influence and proximity to the Cumberland Plain. Fire history and the effects of other forms of disturbance can also significantly affect both the structure and floristics of the understorey. It can range from grassy and herbaceous to densely scrubby. In areas close to the Cumberland Plain, the understorey may include species more typical of that environment such as *Melaleuca nodosa*, *M. erubescens* and *M. thymifolia*, especially in areas with slightly impeded drainage.

Shale Sandstone Transition Forest is characterised by the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition of the vegetation.

(2E) Eucalyptus deanei-E. piperita Tall Open-forest

Eucalyptus deanei-*E. piperita* Tall Open-forest refers to a vegetation community of mixed tree species composition, including *Eucalyptus piperita* (Sydney Peppermint), *E. deanei* (Mountain Blue Gum), *Syncarpia glomulifera* (Turpentine), *Angophora costata* (Sydney Red Gum), *A. floribunda* (Rough-barked Apple), *E. punctata* (Grey Gum) and *E. crebra*

Schedule 1 Amendment

(Narrow-leaved Ironbark). Not all of these species occur in every stand, except for *E. deanei*, whose presence is characteristic of the community.

The community is found in moist, sheltered sites on the talus slopes below the sandstone escarpments of the Jamison, Kedumba and Grose Valleys. It is replaced further west in the Megalong and Kanimbla Valleys by *Eucalyptus cypellocarpa-E. piperita* Tall Open-forest. The community also occurs in some moist, sheltered sites away from the escarpments. The typical vegetation structure is tall open-forest, although this may vary depending on site conditions and history. It is a wet sclerophyll forest, with soft-leaved plants prominent in the understorey.

Eucalyptus deanei-E. piperita Tall Open-forest differs from *E. deanei-E. punctata-Syncarpia glomulifera* Tall Open-forest in that it occurs on different geology (Illawarra Coal Measures, Shoalhaven Group and Narrabeen Group) and *E. deanei* is less prominent.

This community is generally characterised by the occurrence of *Eucalyptus piperita* and *E. deanei* along with the following assemblage of native plant species. Eucalyptus cypellocarpa-*E. piperita* Tall Open-forest is characterised by the presence of *E. cypellocarpa* (Monkey Gum), occurring in association with one or more of *E. piperita* (Sydney Peppermint), *E. oreades* (Blue Mountain Ash) and *E. radiata* subsp. *radiata* (Narrow-leaved Peppermint).

The community is found in moist, sheltered sites on the talus slopes below the sandstone escarpments of the western Blue Mountains (Megalong and Kanimbla Valleys). The community

also occurs in some moist, sheltered sites away from the escarpments, and may occur as far east as Woodford. The typical vegetation structure is tall open-forest, although this may vary depending on site conditions and history. It is a wet sclerophyll forest, with soft-leaved plants prominent in the understorey.

This community is generally characterised by the occurrence of *Eucalyptus cypellocarpa* and *E. piperita* along with the following assemblage of native plant species. (2G) Eucalyptus oreades Open-forest/Tall Open-forest

Eucalyptus oreades Open-forest/Tall Open-forest refers to those vegetation communities dominated by *E. oreades* (Blue Mountain Ash). A range of other Eucalypts may also occur, most commonly including, *E. piperita* (Sydney Peppermint), *E. cypellocarpa* (Monkey Gum) and *E. radiata subsp. radiata* (Narrow-leaved Peppermint).

The characteristic vegetation structure is tall open-forest, however this can vary depending on site conditions and history. In some places the understorey is shrubby, while in moister sites a ferny understorey can be present. Although typically found in gullies or on sheltered slopes in the upper mountains (Bell to Wentworth Falls), this community also occurs in relatively exposed sites eg ridgetops, where suitable depth of shale provides more fertile conditions and better soil moisture.

Eucalyptus oreades is extremely fire-sensitive, with individual trees readily killed in a major bushfire. Although the capacity of *E. oreades* to regenerate from seed after fire is indicated by even-aged stands of trees often found in this community, the species will be adversely affected or eliminated entirely by an inappropriate fire regime of frequent burning.

This community is relatively rare outside of the National Park estate and has apparently suffered significant loss due to urbanisation and associated infrastructure, as well as being degraded by weed invasion, changed fire regimes, and stormwater runoff.

Eucalyptus oreades open-forest/tall open-forest is characterised by the following assemblage of native plant species. Other

(2H) Eucalyptus dalrympleana-E. piperita Tall Open-forest

Eucalyptus dalrympleana-*E. piperita* Tall Open-forest is characterised by the presence of *E. dalrympleana* (Mountain Gum), occurring in association with *E. piperita* (Sydney Peppermint) and *E. radiata* subsp. *radiata* (Narrow-leaved Peppermint). In the City, this community appears to be restricted to one small stand at the upper end of Popes Glen Creek, Blackheath, where it occurs on a sheltered, south-facing slope of Narrabeen Group geology. The vegetation structure is variable within this disturbed stand, from tall open-forest to open-forest and woodland. It is a wet sclerophyll forest, with soft-leaved plants prominent in the understorey.

Eucalyptus dalrympleana-*E. piperita* Tall Open-forest is characterised by the following assemblage of native plant species. Other species also occur, but the list is indicative of the species composition of the community at Blackheath.

<i>Acacia longifolia</i>	<i>Acacia melanoxylon</i>	<i>Arrhenechthites mixta</i>

(2) Sun Valley Cabbage Gum Forest (*Eucalyptus amplifolia*)

The Sun Valley Cabbage Gum Forest is listed as an Endangered Ecological Community in Part 3 of Schedule 1 to the *Threatened Species Conservation Act 1995*.

This community is dominated by *Eucalyptus amplifolia* (Cabbage Gum) that occurs on the diatrema at Sun Valley. An associated tree species is *E. eugenioides* (Thin-leaved Stringybark). Although there is still good tree cover in the area (remnant trees and regeneration), the understorey of this community has been grossly altered through clearing and grazing. Remaining native understorey species include *Acacia parramattensis*, *Imperata cylindrica*, *Lomandra longifolia* and *Pteridium esculentum*, but the original composition of the understorey is difficult to assess. Attempts to restore this community at Sun Valley are certainly warranted.

Eucalyptus amplifolia Tall Open-forest is characterised by the following assemblage of native plant species. Other species also occur, but the list is indicative of the species composition of the community at Sun Valley.

(2J) Montane Gully Forest (*Eucalyptus fastigata*-*E. cypellocarpa*-*E. dalrympleana*)

This community is associated with moderate to steep slopes and narrow gorges on the Narrabeen Group and Illawarra Coal Measures below the escarpments around Mount York and north to Bell. There is substantial intergradation with vegetation typical of the sandstone plateau close to the escarpments and with the *Eucalyptus cypellocarpa* and *E. piperita* communities between Blackheath and Mount Victoria. The boundary of this community approximates the lower distribution of *E. fastigata*, *E. dalrympleana* and *E. blaxlandii*, and the upper distributional limits of *Angophora costata* and *Syncarpia glomulifera*.

Tree species include *Eucalyptus fastigata* (Brown Barrel), *E. cypellocarpa* (Monkey Gum), *E. dalrympleana* (Mountain Gum) with *E. oreades* (Blue Mountain Ash), *E. blaxlandii* (Blaxland's Stringybark), *E. radiata* subsp. *radiata*

(Narrow-leaved Peppermint) and *E. sieberi* (Silver-top Ash). The understorey is moderately shrubby with *Acacia falciformis*, *A. terminalis*, *A. buxifolia*, *Oxylobium ilicifolium* and *Leptospermum flavescens* occurring, together with ferns such as *Culcita dubia*. *Acacia dealbata* was more common here than in any other parts of the study area. It appears that *E. fastigata* occurs primarily in the more sheltered sites with *E. dalrympleana* relatively common on the lower slopes where this unit blends into remnants of the vegetation found on the edge of the agricultural land around Little Hartley.

Montane Gully Forest is characterised by the following assemblage of native plant species. Other species also occur, but the list is indicative of the major diagnostic species composition.

<i>Acacia buxifolia</i>	<i>Acacia dealbata</i>	<i>Acacia falciformis</i>

(2K) Blue Gum Riverflat Forest (*Eucalyptus deanei*)

The Blue Gum Riverflat Forest in the Blue Mountains is included within the Sydney Coastal River-Flat Forest listed as an Endangered Ecological Community in Part 3 of Schedule 1 to the *Threatened Species Conservation Act 1995*.

This community is usually restricted to terraces of deep alluvium along larger watercourses of the lower Blue Mountains. *Eucalyptus deanei* (Mountain Blue Gum) is dominant and may be almost monospecific, with occasional *Angophora floribunda* (Rough-barked Apple) and a small tree layer which may contain large bipinnate wattles and infrequent *Allocasuarina torulosa* (She-oak). The understorey is open and often dominated by grasses or ferns (or both) with scattered mesic shrubs becoming denser in the immediate vicinity of the watercourse.

This community superficially resembles the Blue Mountains Shale Cap Forest but the two occur in different positions in the landscape.

This community is generally characterised by the almost monospecific occurrence of *Eucalyptus deanei* along with the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition of the vegetation.

(2L) Casuarina cunninghamiana 'River Oak Forest'

The *Casuarina cunninghamiana* River Oak Forest in the Blue Mountains is included within the Sydney Coastal River-Flat Forest listed as an Endangered Ecological Community in Part 3 of Schedule 1 to the *Threatened Species Conservation Act 1995*.

Narrow bands of River Oak Forest occur on the alluvial banks of the Coxs River. This community also occurs in small, unmapped occurrences along the Hawkesbury-Nepean River. The dominant canopy species is *Casuarina cunninghamiana* subsp. *cunninghamiana* (River Oak) with occasional subdominants being *Angophora floribunda* (Rough-barked Apple) *Eucalyptus viminalis* (Ribbon Gum) and *E. tereticornis* (Forest Red Gum), and rarely *A. subvelutina* (Broad-leaved Apple). *Backhousia myrtifolia* (Myrtle) can also occur on the sheltered fringes of this community. Along the

larger tributaries to the east of the Coxs River, the understorey is often dominated by *Leptospermum* spp.. In these situations, *Lomandra longifolia* and several sedges can dominate the ground layer.

The understorey is generally sparse because of the mobile nature of the substrate (mobile gravels, sands and large areas of bare granite). The surrounding lands have often been cleared for agriculture and these communities are often highly prone to willow and other weed infestation.

Casuarina cunninghamiana River Oak Forest is characterised by the following assemblage of native plant species. Other species may also occur, but the list is indicative of the species most characteristic of this composition.

<i>Acacia floribunda</i>	<i>Acacia parvipinnula</i>	<i>Agrostis avenaceus</i>
<i>Alisma plantago-aquatica</i>	<i>Angophora floribunda</i>	<i>Angophora subvelutina</i>

(2M) Eucalyptus radiata subsp. radiata-E. piperita Open-forest

This community is only known from a small number of easterly-facing slopes in Katoomba and Leura but may occur elsewhere in the higher Blue Mountains. The dominant canopy trees are *Eucalyptus radiata* subsp. *radiata* (Narrow-leaved Peppermint) and *E. piperita* (Sydney Peppermint). *E. sieberi* is also present, particularly where this community grades into the common *E. sieberi*/*E. piperita* community which tends to occur upslope. *E. mannifera* subsp. *gullickii* can occur infrequently, particularly downslope towards adjoining swamp or riparian vegetation.

The understorey is a mix of dry and wet sclerophyll species and may contain species associated with Blue Mountains Swamps where these communities adjoin. The following list is indicative of some of the major diagnostic species.

<i>Acacia terminalis</i>	<i>Banksia cunninghamii</i>	<i>Banksia spinulosa</i>
<i>Boronia microphylla</i>	<i>Callicoma serratifolia</i>	<i>Chionochoa pallida</i>

(2N) Melaleuca styphelioides-M. linariifolia Forest

This community occurs at the base of the slopes below the escarpments surrounding the Megalong, Kanimbla, Jamison and Kedumba Valleys. It is restricted to small alluvial/colluvial deltas perpendicular to the escarpment or to alluvial deposits along ephemeral watercourses running parallel to the escarpment. It is a generally moist forest in which *Melaleuca* species are dominant and occur under an open canopy of tall *Eucalyptus cypellocarpa* (Monkey Gum) or less often, *E. viminalis* (Ribbon Gum), with *E. deanei* (Mountain Blue Gum) most common east of Narrow Neck Peninsula. Other emergents can include *E. crebra* (Narrow-leafed Ironbark) and *E. punctata* (Grey Gum). The understorey is generally depauperate because of shading from the often-dense strata of *Melaleuca*. In areas subject to or recovering from grazing, it tends to be dominated by unpalatable graminoids and shrubs including *Lomandra longifolia* and *Bursaria* species, while in less modified situations there are numerous small climber/twiners such as *Desmodium*, *Eustrephus* and *Glycine* species along with the woody vines *Marsdenia*, *Cissus* and *Parsonsia*, herbs such as *Dichondra*, *Centella* and *Viola*, and a sparse layer of grasses such as *Oplismenus* species. Occasionally, in sites with more impeded drainage, small sedgeland communities are present, and in particularly moist or sheltered (or both) locations, there can be some intergradation with rainforest assemblages.

This community is generally characterised by the occurrence of the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the range of species composition within this community type.

(20) Riparian Granite Slopes Forest

This community is present in the headwaters of ephemeral streams that drain the granite upland of the Megalong Valley down to the Coxs River. The structure is generally an open-forest to woodland with a low, moist and herbaceous understorey in which *Stellaria flaccida* and *S. pungens* are prevalent. The small ferns, *Asplenium flabellifolium*, *Cheilanthes sieberi* and *C. distans* may be present with *Blechnum nudum* scattered along the watercourse. A moist grass layer can dominate the ground stratum and will often contain the herbs, *Dichondra repens*, *Centella asiatica*, the twiners *Desmodium varians* and *Glycine* species with various *Senecio* species scattered throughout. The canopy species include *Eucalyptus viminalis* (Ribbon Gum), *E. tereticornis* (Forest Red Gum) and *Angophora floribunda* (Rough-barked Apple) with an occasional subcanopy of *Allocasuarina torulosa*. A small number of rainforest species may be present, particularly along the watercourse or on the sheltered side of the slope. Examples include *Rapanea howittiana*, *Ficus coronata* and *Trema aspera*. This community can grade into Megalong Granite Dry Rainforest (see community (1C)).

This community is generally characterised by the occurrence of the following assemblage of native plant species. Other species also occur, and not all of the following species are present in

(2P) Megalong Foothlopes Forest

This community is found on the foothlopes below the escarpments, extending towards the centre of the Megalong Valley until displaced by the vegetation on the granite batholith. Some intergradation of these communities occurs and the outer margin of the Shoalhaven Group supports a community often dominated by *Eucalyptus sclerophylla* (Hard-leafed Scribbly Gum). Several variants of the forest form are recognised, with structure ranging from open-forest/woodland to open-forest and canopy species including *E. eugenioides* (Thin-leafed Stringybark), *E. globoidea* (White Stringybark) (and hybrids), *E. punctata* (Grey Ironbark), *E. sclerophylla* (Hard-leafed Scribbly Gum) and *Angophora costata* (Sydney Red Gum). At the interface with the adjoining forests that dominate the slopes below the cliffline, a taller variant occurs in which *E. cypellocarpa* (Monkey Gum) may be present. Such situations can be associated with the existence of *Melaleuca styphelioides*-*M. linariifolia* swamp forest.

This community is generally characterised by the occurrence of the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the range of species composition within this community type.

(2Q) Megalong Granite Forest/Woodland (*Eucalyptus tereticornis*-*E. eugenioides*)

Much of the undulating granite country supporting this community was cleared for agriculture in the nineteenth century. Fragmented remnants are found in the Coxs River valley at elevations between 250 metres and 850 metres on deep, well-drained sandy soils derived from carboniferous adamellite, granite and grandiorite. Much of the vegetation is now a “derived” woodland (*sensu* Keith and Benson, 1988) but was probably forest prior to modification by clearing, grazing, rabbits and an altered fire regime.

The most characteristic tree species are *Eucalyptus tereticornis* (Forest Red Gum) and *E. eugenioides* (Thin-leaved stringybark) together with *E. viminalis* (Ribbon Gum). *E. dalrympleana* subsp. *dalrympleana* (Mountain Gum) can be locally dominant, particularly on the higher elevations (which are often quite exposed). *E. bridgesiana*, *E. dives*, *E. rubida* and *E. camphora* are generally rare within this community and are not considered characteristic of it, however *Angophora floribunda* (Rough-barked Apple) is quite common and extends well beyond the lower slopes and

watercourses. *E. macrorhyncha subsp. macrorhyncha* occurs mainly in the western areas of the granite vegetation but is occasionally a significant canopy component. *Acacia falciformis* can also be a locally significant canopy species and can be present in most variants of the granite communities. The less common eucalypts are generally associated with the complex ecotones on the eastern edges of the granite vegetation or with other very localised conditions.

The understorey of the Megalong Granite Forest/Woodland tends to be low and dominated by grasses, graminoids (particularly *Lomandraceae*) and herbs, in particular, *Astraceae*. Climbers such as *Desmodium*, *Glycine* and *Clematis* are often present. Shrubs are either relatively rare or else the shrub layer consists of a small number of common unpalatable species such as *Bursaria* species and *Lissanthe strigosa*. The understorey composition can vary greatly depending on the amount of exposure.

This community is generally characterised by the occurrence of the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the major diagnostic species.

3 Low Open-forest**Melaleuca linariifolia Low Open-forest**

Melaleuca linariifolia Low Open-forest is found on sandy alluvial soils along certain creeks in the lower Blue Mountains, in which the low paperbark tree, *M. linariifolia* (Snow-in-summer), dominates the vegetation. This creekline vegetation is associated with creeks on deep alluvial sand deposits, rather than the sandstone substrates more typical of Blue Mountains creeks. The typical vegetation structure is a narrow band of low open-forest or low closed-forest along the creek. Occasional emergent *Eucalyptus* or *Angophora* trees may be present above the *Melaleuca* canopy.

This community is generally characterised by the occurrence of *Melaleuca linariifolia* along with the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition of the vegetation.

4 Woodlands**(4A) Eucalyptus mannifera subsp. gullickii Alluvial Woodlands**

These woodlands are found on alluvial soils along certain creeks in the upper Blue Mountains, in which *Eucalyptus mannifera subsp. gullickii* (Brittle Gum) is the dominant tree species or co-dominant with *E. radiata subsp. radiata* (Narrow-leaved Peppermint). The association of the community with creekside alluvium is a critical feature in its definition, since *E. mannifera subsp. gullickii* and *E. radiata subsp. radiata* may also be common species in other communities in the upper Blue Mountains. The vegetation structure is woodland or open-forest. *E. mannifera subsp. gullickii* occurs in some sites as a sparse tree layer (an open-woodland) over swamp vegetation, but such stands are better classified within the Blue Mountains swamp communities rather than as *E. mannifera subsp. gullickii* Alluvial Woodland.

Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

Amendment

Schedule 1

Two forms of *Eucalyptus mannifera* subsp. *gullickii* Alluvial Woodland may be distinguished. At higher altitudes (Mount Victoria-Blackheath), *E. mannifera* subsp. *gullickii* is the main tree species and the community is termed *E. mannifera* subsp. *gullickii* woodland. At slightly lower altitudes (Katoomba-Leura), *E. mannifera* subsp. *gullickii* and *E. radiata* subsp. *radiata* are co-dominant and the community is termed *E. mannifera* subsp. *gullickii*-*E. radiata* subsp. *radiata* Woodland.

This community is generally characterised by the occurrence of *Eucalyptus mannifera* subsp. *gullickii* along with the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition of the vegetation.

(4B) Eucalyptus sclerophylla Bench Woodland

Eucalyptus sclerophylla Bench Woodlands occur on dry sandy alluvial benches along certain creek systems in the lower Blue Mountains. This community may also occur on higher benches on a mix of alluvial and colluvial soils. *E. sclerophylla* (Hard-leaved Scribbly Gum) is the dominant tree species sometimes co-dominant with *Angophora bakeri* (Narrow-leaved Apple). The typical vegetation structure is woodland, although this may vary depending on site conditions and history. The association between this community and alluvial or colluvial soils is a critical feature in its definition, since *E. sclerophylla* is also the dominant tree species in another, more common vegetation community, with a different understorey, that occurs on northern and western aspects on sandstone geology in the middle and upper Blue Mountains. The *E. sclerophylla* trees in the latter community tend to be smaller than those in the *E. sclerophylla* Bench Woodland.

This community is generally characterised by the occurrence of *Eucalyptus sclerophylla* along with the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition of the vegetation.

(4C) Kowmung Wilderness Complex

This Complex includes open-forest, open-forest/woodland and woodland communities. It has been included in the Woodland section because most of the vegetation is of a woodland structure.

Most of this Complex occurs in Kanangra-Boyd National Park with some areas in Blue Mountains National Park. A relatively small area occurs outside these reserves in the far south of the Megalong Valley. Small areas of dry rainforest and riparian complex are present within the Kowmung Wilderness Complex.

Indicative canopy species include *Eucalyptus crebra* (Narrow-leafed Ironbark), *E. tereticornis* (Forest Red Gum), *E. punctata* (Grey Gum), *E. viminalis* (Ribbon Gum), *E. melliodora* (Yellow Box), *E. eugenioides* (Thin-leafed Stringybark) and *Angophora floribunda* (Sydney Red Gum). The understorey can be very open and grassy/herbaceous or can sometimes have a relatively well developed shrub layer in which *Bursaria* species can be prevalent. Small twiners and *Cheilanthes* species (Poison Rock Ferns) can be characteristic of the ground stratum as can numerous *Senecio* species and other daisies.

This community is generally characterised by the occurrence of the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of the community, but the list is indicative of the species composition.

(4D) Redgum Swamp Woodland (*Eucalyptus tereticornis*)

This community is dominated by *Eucalyptus tereticornis* (Forest Redgum) and is known only from a small example between Megalong Creek and Nellies Glen Road in the central eastern Megalong Valley. This site is associated with a swamp ephemeral drainage line that generally defines the ecotone between the vegetation on the lower Shoalhaven Group of sediments and that on the Carboniferous Granite, which dominates the Megalong Valley. Adjoining communities include an example of Coxs River Swamp, the so-called Megalong Forest of Keith and Benson (1988) and the Megalong Granite Forest and woodland. The understorey has been modified by grazing and was probably cleared in the past to facilitate this use.

Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

Amendment

Schedule 1

The understorey has been modified by grazing and was probably cleared in the past to facilitate this use. *Leptospermum* species are dominant along the drainage line and in the more swampy sections which lack open water. Drier areas are dominated by grasses with little or no shrub layer and a relatively sparse tree canopy. This community is threatened by small size, grazing, weed invasion, rabbits and recreational vehicle use.

Redgum swamp woodland is broadly characterised by the following assemblage of diagnostic plant species. Other species may also occur, and not all of the following species are present in every stand of the community.

<i>Acacia floribunda</i>	<i>Agrostis avenaceus</i>	<i>Callistemon</i> sp. nov. Megalong Valley

5 Heath/scrub/sedgeland/fermland

(5A) Blue Mountains Heath and Scrub

Blue Mountains Heath and Scrub consists of a well-developed shrub layer, with no tree layer or only a sparse layer of scattered low trees, sometimes with a mallee habit (low, multi-stemmed shrub eucalypts). It occurs primarily in exposed sites with very shallow soils on Narrabeen Group and Hawkesbury Sandstone geology. Typical situations are cliff

Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

Schedule 1 Amendment

tops and high, rocky ridges, especially on the westerly aspect and with skeletal soils. The vegetation structure is typically an open-heath, less often a closed-heath, and may be interspersed with patches of open-scrub or closed-scrub formed by stands of mallees or *Leptospermum* species. It is also typically interspersed with areas of bare rock. It can occur on the fringes of or within so-called hanging swamps and in such situations it can also intergrade with vegetation of the Riparian Complex. There is also considerable intergradation between forms of woodland to open-woodland with a *Eucalyptus sclerophylla* canopy with Blue Mountains Heath and Scrub forming the understorey in such communities.

Blue Mountains Heath and Scrub has a mixed and variable species composition. Common shrub species include *Allocasuarina distyla*, *A. nana*, *Banksia ericifolia*, *Epacris microphylla*, *Eucalyptus stricta*, *Hakea laevipes*, *H. teretifolia*, *Kunzea capitata*, *Leptospermum trinervium* and *Petrophile pulchella*. Common herb and sedge species include *Actinotus minor*, *Platysace linifolia*, *Lepidosperma filiforme*, *L. viscidum*, *Lepyrodia scariosa*, *Ptilothrix deusta* and *Schoenus villosus*.

Two forms of Blue Mountains heath have been distinguished (Keith and Benson 1988, Smith and Smith 1995 a–e): montane heath above about 850–900 metres elevation and lower Blue Mountains heath below this level. The two forms intergrade between Wentworth Falls and Katoomba. Montane heath is characterised by the presence of high altitude species such as *Allocasuarina nana*, *Darwinia taxifolia* and *Phyllota squarrosa*, while lower Blue Mountains heath is characterised by the presence of low altitude species such as *Allocasuarina distyla*, *Darwinia fascicularis* and *Phyllota phyllicoides*. However, most of the more common heath plants occur across the full altitudinal range.

It is also possible to distinguish two forms of lower Blue Mountains heath: a Hawkesbury Sandstone form at lower altitudes (chiefly in the Faulconbridge to Woodford area), and a Narrabeen Sandstone form at intermediate altitudes (Hazelbrook to Wentworth Falls). The Hawkesbury Sandstone

Blue Mountains Local Environmental Plan 1991 (Amendment No 31)

Amendment

Schedule 1

form is characterised by species such as *Acacia oxycedrus*, *Baeckea brevifolia* and *Eucalyptus burgessiana* that are absent from heath on Narrabeen Sandstone.

In the prolonged absence of fires, the heath shrubs grow taller and thicker, transforming the vegetation from an open-heath to a closed-scrub, especially in relatively moist and sheltered sites. These communities may be floristically similar to the closed-heaths described above but are structurally unique. Shrubs including *Banksia ericifolia*, *B. serrata*, *B. spinulosa*, *Hakea laevipes*, *H. teretifolia* and a range of *Leptospermum* species may all attain heights of up to 8 metres over a generally grassy, herbaceous understorey. In locally moist areas, the fern *Gleichenia dicarpa* may become common in the ground stratum.

In the Megalong Valley, forms of heath occur which are floristically and geologically distinct from those others within the scope of the Blue Mountains Heath description. The majority of Megalong Valley Heath is associated with the Shoalhaven Group of sediments with a rare exception associated with the Carboniferous Granite. Dominant species of the heath include *Leptospermum trinervium*, *L. polygalifolium*, *L. juniperinum*, *Isopogon anemonifolius*, *Hakea salicifolia*, *H. sericea* and *Banksia spinulosa* while the locally uncommon shrub *Mirbelia pungens* may also be present.

Only one example is known of heath occurring on granite within the Megalong Valley, however other examples are likely to occur outside the City, west of the Coxs River. This example is dominated by a relatively low-growing shrubby *Acacia* which has not been able to be identified but is apparently related to *Acacia floribunda*.

Considered as a whole, Blue Mountains Heath and Scrub is characterised by the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every stand of heath, but the list is indicative of the species composition of the vegetation.

(5B) Blue Mountains Swamps

A range of swamps occurs within the City. Swamp vegetation develops on poorly drained sites where the soil is waterlogged for prolonged periods. Several variants are recognised and are described below.

In the City, swamps occur, not only in low-lying sites on valley floors ('valley swamps'), but also in the headwaters of creeks and on steep hillsides ('hanging swamps'). Some swamps represent a combination of valley swamp and hanging swamp. The upper boundary of the swamp is often clearly defined by the outcropping of a layer of claystone. Groundwater seeps along the top of the impermeable claystone layer, reaching the surface where the claystone protrudes, thus forming a swamp on the hillside below. Other swamps receive their water supply from feeder streams rather than groundwater, or from a combination of the two.

Blue Mountains Swamps vary greatly in their structure and plant species composition, ranging from closed-sedgeland or closed-fernland to open-heath or closed-heath, sometimes open-scrub or closed-scrub. The shrub-dominated swamps are similar in vegetation structure to some of the forms of Blue Mountains Heath and Scrub, but they differ in species composition and ecological function, and are more appropriately classified with the sedge and fern-dominated

swamps. However, in many instances the botanical boundary between Blue Mountains Swamp and Blue Mountains Heath and Scrub communities is unclear or can only be defined at a small scale as the two vegetation types can intergrade extensively.

Common shrubs in the Blue Mountains Swamps that occur on the sandstone plateaux include *Acacia ptychoclada*, *Baeckea linifolia*, *Banksia ericifolia*, *Callistemon citrinus*, *Epacris obtusifolia*, *Grevillea acanthifolia*, *Hakea teretifolia*, *Leptospermum grandifolium*, *L. juniperinum* and *L. polygalifolium*. Common sedges include *Empodisma minus*, *Gymnoschoenus sphaerocephalus*, *Lepidosperma limicola* and *Xyris ustulata*. The main fern species is *Gleichenia dicarpa*. The swamps of the plateaux include communities described by Keith and Benson (1988) and Benson and Keith (1990) as Blue Mountains Sedge Swamps and Newnes Plateau Shrub Swamps.

The Kurrajong Fault Swamps are valley swamps that occur in the lower Blue Mountains on sandy alluvial deposits associated with the Kurrajong Fault. Common shrubs are *Acacia rubida*, *Callicoma serratifolia*, *Callistemon citrinus*, *Leptospermum juniperinum* and *Melaleuca linariifolia*. Common species in the understorey are *Baumea rubiginosa*, *Gahnia clarkei*, *Gleichenia dicarpa* and *Schoenus melanostachys*.

The Coxs River Swamps are another variant encompassed by this community. These swamps occur on the clayey organic sediments derived from the Illawarra Coal Measures where creeks drain at the base of the escarpment. They support a simple flora dominated by *Leptospermum obovatum*, *L. juniperinum* and *Grevillea acanthifolia* with a dense ground cover of *Carex* and *Juncus* species.

The Megalong Swamps occur under much the same circumstances as the Coxs River Swamps but differ considerably in both structure and floristics. The Coxs River Swamps tend to occur as scrub, open-scrub and low open-scrub to wet heath with a prominent sedge layer, while the Megalong Swamps are closed to tall closed-scrub dominated by *Leptospermum juniperinum* and *L. polygalifolium* with an undescribed shrub *Melaleuca* sp. Megalong Valley, *C. citrinus*

and infrequent emergents of *Eucalyptus camphora* and *Melaleuca linariifolia*.

Blue Mountains Swamps are characterised by the following assemblage of native plant species. Other species also occur, and not all of the following species are present in every swamp, but the list is indicative of the species composition of the vegetation.

(5C) Pagoda Rock Complex

Within the City, this community occurs only in the far northwest near Bell. It occurs primarily outside the City on the Newnes Plateau where it is exemplified in Gardens of Stone National Park.

Benson and Keith (1990) list three structural divisions within this Complex: open-heath of *Allocasuarina nana*, *Leptospermum arachnoides*, *Lepidosperma viscidum*, *Platysace lanceolata* and *Banksia ericifolia*; open-mallee scrub of *Eucalyptus laophila* which is not known from the City of Blue Mountains; and woodland of *E. sieberi* (Silver-top Ash), *E. piperita* (Sydney Peppermint) and *E. oblonga* (Sandstone Stringybark). (5D) Lagoon Vegetation (Glenbrook Lagoon)

Lagoon Vegetation (Glenbrook Lagoon) is the wetland vegetation associated with Glenbrook Lagoon. This waterbody is the only naturally occurring upland lagoon in the City, although wetland vegetation has also developed around artificially created water bodies such as Wentworth Falls Lake and Woodford Lake. Glenbrook Lagoon consists of an area of open water with submerged aquatic vegetation, surrounded by extensive reedbeds dominated by the large sedges *Lepironia articulata* and *Eleocharis sphacelata*. Fringing the reedbeds is a narrow band of low paperbark trees *Melaleuca linariifolia*.

Native wetland plants recorded at Glenbrook Lagoon include the following species. Other species are also likely to be present.

<i>Acacia rubida</i>	<i>Agrostis avenacea</i>	<i>Baumea articulata</i>
<i>Callistemon citrinus</i>	<i>Callistemon linearis</i>	<i>Centella asiatica</i>
<i>Cynodon dactylon</i>	<i>Eleocharis sphacelata</i>	<i>Epilobium billardierianum</i>

6 Blue Mountains Riparian complex

Blue Mountains Riparian Complex refers to the narrow bands of vegetation found along perennial and non-perennial watercourses in the Blue Mountains. It applies to those sections of the creek where there are distinct differences between the creekside vegetation and the adjacent vegetation further from the creek. Riparian (creekside) vegetation can be diverse and variable in structure and composition. It typically consists of species that are restricted to the immediate creekside environment plus other species from the adjacent vegetation communities. Common shrubs and low trees characteristic of riparian vegetation in the Blue Mountains include *Acacia rubida*, *Baeckea linifolia*, *Bauera rubioides*, *Callicoma serratifolia*, *Callistemon citrinus*, *Leptospermum polygalifolium*, *Lomatia myricoides*, *Tristania nerifolia* and *Tristaniopsis laurina*. Ferns tend to be a major component of the riparian vegetation, and include *Blechnum nudum*, *Calochlaena dubia*, *Gleichenia microphylla*, *Sticherus*

Schedule 1 Amendment

flabellatus and *Todea barbara*. Common sedges and rushes include *Gahnia sieberiana*, *Juncus planifolius* and *Schoenus melanostachys*. Pockets of rainforest, swamp and moist cliffline (waterfall) vegetation are often present along the creeks and add to the floristic diversity of the riparian vegetation.

Blue Mountains Riparian Complex is characterised by the following assemblage of native plant species. Other species also occur, and not all of the following species are present along every creek, but the list is indicative of the species composition of the vegetation. The list does not include *Eucalyptus* species. Although a variety of eucalypts may occur along the creeks, they generally reflect the composition of the adjacent vegetation community rather than the riparian vegetation itself.

<i>Acacia obtusifolia</i>	<i>Adiantum aethiopicum</i>	<i>Austromyrtus tenuifolia</i>

7 Blue Mountains Escarpment Complex

Blue Mountains Escarpment Complex refers to the distinctive vegetation communities associated with moist, sheltered rock faces, the escarpments and other extensive outcroppings of sandstones in the Blue Mountains. The habitat of this vegetation varies from rock crevices, ledges, caves and the talus at cliff bases through to isolated rock outcrops. The vegetation consists of a diverse mixture of moist cliffline vegetation, heath, swamp, rainforest, mallee and forest communities that can vary on a very small scale.

Species found in the moist sites include *Alania endlicheri*, *Baeckea linifolia*, *Blechnum ambiguum*, *B. wattsii*, *Callicoma serratifolia*, *Dracophyllum secundum*, *Drosera binata*, *Epacris reclinata*, *Gleichenia microphylla*, *G. rupestris*, *Leptospermum rupicola*, *Sprengelia monticola* and *Todea barbara*. Where a tree canopy is present, it can contain elements of various communities but *Eucalyptus oreades* (Blue Mountain Ash) is by far the most common. *E. piperita* (Sydney Peppermint), *E. sieberi* (Silvertop Ash) and a range of mallees, particularly the common *E. stricta* (Mallee Ash), can also be locally prevalent.
