2. No works may be commenced unless and until a private certifier, or the Port Pirie Regional Council and The District Council of Mount Remarkable, have certified to the Development Assessment Commission that all work that constitutes building work under the Development Act 1993, complies with the Building Rules.
3. The proponent must construct the intake/outfall pipes during the months of March, April and May (to minimise the disruption to migratory bird species; and to minimise the impact of dredging on marine native vegetation communities, thus avoiding stressful conditions during summer and low growth rates/ productivity in winter, and reduce the effects of turbidity).
4. Construction of the development hereby authorised must not be commenced until:
- (a) The Marine Environmental Management and Monitoring Plan (Construction and Operational Phases) has been developed to the satisfaction of the Coast Protection Board and approved by the Development Assessment Commission.
 - (b) The Environmental Management and Monitoring Plan has been developed to the satisfaction of the Environment Protection Authority and approved by the Development Assessment Commission.
 - (c) The artefacts in the two identified archaeological sites on the plant site have been collected and recorded by representatives of the Nukunu People's Council.

- (d) The proponent has reached agreement with the Nukunu People's Council regarding the monitoring of earthworks and other activities likely to disturb the dune area lying between the two identified archaeological sites and along the transmission line and pipeline corridors, and notified the Development Assessment Commission of such an agreement.

5. The proponent must not blast for the purpose of constructing the pipe trench, unless explosion vibration characteristics and monitoring requirements have been agreed with the Environment Protection Authority and The District Council of Mount Remarkable. Blasting must be carried out in compliance with Australian Standard 2187.

6. The typical operation of the proposed development must not exceed an equivalent noise level of 35 dB(A) at the nearest occupied residences when measured in accordance with the Environment Protection (Industrial Noise) Policy 1994. Compliance with this condition must be achieved for worst-case weather conditions (those conducive to noise propagation) equivalent to a Class F Pasquill-Gifford stability category.

7. The environmental noise assessment associated with the construction phase of the project must be repeated following final selection of the construction equipment. The environmental noise assessment must identify the noise reduction measures that are reasonable and practicable. The noise assessment report must be submitted to the Environment Protection Authority, together with the name of the person who will be responsible for ensuring that the measures outlined in the report will be implemented. The relevant content of the assessment must be shown to have been included within an approved construction plan, and this construction plan must be implemented. The measures that are reasonable and practicable (to be listed in the construction plan) must include as a minimum:

- Restriction of activities that will not achieve Condition 6 to Monday through Saturday (7 a.m. to 6 p.m.) or Sunday (9 a.m. to 6 p.m.).
- Provision of maintained proprietary sound reduction measures such as mufflers and enclosures to all relevant equipment for which proprietary treatment is available.
- Provision of a monitoring program to ensure Condition 6 is achieved.
- Guidance within the construction plan of the steps to be taken should the monitoring program indicate an activity being undertaken that exceeds Condition 6.
- Community notification of proposed start and finish times of construction activities and identification of any activities that may have a greater impact.

8. The environmental noise assessment associated with the operational phase of separate major items of plant and equipment must be repeated following final selection of the plant and equipment to be used. The extent and technical details of the noise reduction measures to achieve Condition 6 shall be provided within this assessment and certified by an acoustic engineer (who must be eligible for membership of both the Institution of Engineers Australia and the Australian Acoustical Society), prior to the installation of the said plant equipment.

9. The proponent must undertake background ambient air monitoring at the plant site and inside and outside of the buffer zone for a period of 12 months prior to the commencement of operation. The monitoring must be undertaken to standards prescribed by the Environment Protection Authority. The following analytes must be sampled at each site for the 12 month period:

Particulate matter (PM₁₀ and TSP)
 NO_x
 Cl₂
 HCl
 SO₂
 Dioxins and Furans
 PCB's
 HCB's

The location of the monitoring sites must be to the reasonable satisfaction of the Environment Protection Authority, and the results of monitoring must be provided to the Environment Protection Authority.

10. The proponent must install a meteorological monitoring station within the plant site, and properly operate and record data from that monitoring station for a period of at least 12 months prior to the commencement of operation. The monitoring must be undertaken to standards prescribed by the Environment Protection Authority. The location of the monitoring site must be to the reasonable satisfaction of the Environment Protection Authority, and the results of monitoring must be provided to the Environment Protection Authority.

11. The proponent shall lodge two copies of a certified survey plan of the land division numbered 354/D515/03 with the Development Assessment Commission for certificate purposes.

NOTES TO APPLICANT:

- The Marine Environmental Management and Monitoring Plan (Construction and Operational phases) requires further development in order to receive approval, by the addition of further particulars of monitoring and dredging.
- The Environmental Management and Monitoring Plan requires further development in order to receive approval, by the addition of requirements outlined in the Assessment Report.
- If the development is not commenced by substantial work on the site by 5 July 2004, unless an additional extension of time is granted by the Development Assessment Commission as delegate of the Governor, this development authorisation may be cancelled by the Governor.
- The proponent should undertake the project in compliance with all relevant State and Commonwealth legislation (and as amended from time to time) as it affects the development site, including pipelines, power transmission lines and water intake and discharge areas.
- If during the construction or operation of the development the proponent discovers evidence of an Aboriginal site or any Aboriginal objects or remains, the proponent is required by the Aboriginal Heritage Act 1988 to report particulars of such discovery as soon as practicable to the Minister administering that Act and thereafter comply with any directions given by that Minister.
- The proponent has an obligation under the Aboriginal Heritage Act 1988, whereby any 'clearance' work which may require permission to disturb, damage or destroy Aboriginal Sites, must be undertaken with the full authorisation of the Minister for Aboriginal Affairs, according to section 23 of the Aboriginal Heritage Act 1988.
- During the detailed design stage, the proponent should investigate the option of locating the discharge pipeline under the intake trench in a single 'disturbance corridor', as opposed to establishing two separate corridors.
- A Landscaping Plan should be prepared that indicates the areas to be revegetated, species to be planted, methodologies and monitoring. The Plan should include a section on the management and protection of remnant native vegetation found on the site, especially to integrate existing stands with boundary plantings (for example, understorey plantings may be needed to increase screening effectiveness). Pest plant and animal control aspects should also be addressed. The plan should be prepared in consultation with relevant government agencies (e.g. Department for Environment and Heritage and Primary Industries and Resources SA), and be incorporated into the Environmental Management and Monitoring Plan.
- If the proponent intends to proceed with the proposed boat ramp improvements, an application should be lodged for development authorisation of the boat ramp improvements. Detailed design plans and cross-sections should be provided for consent. The public boat ramp facility should be generally designed in accordance with the South Australian Boating Advisory Committee's Guidelines for Planning, Design and Construction of Boat Launching Facilities and be independently certified by a registered engineer, to the reasonable satisfaction of Transport SA (Marine Facilities), prior to construction commencing. Final design and construction of the boat ramp facility should ensure that any run-off or accidental spills are prevented from entering the basin without suitable prior treatment to reduce pollutants.

- In the event of a failure of the SA Water supply, the Magnesium Plant would need to instigate a controlled shut down of critical sections of the operation which rely on a continuous supply of water. An on-site storage of sufficient size to mitigate the risk to the Plant should be considered. If the currently disused Nelshaby Reservoir is to be considered as an emergency supply (an off-site storage), this water cannot be introduced into a potable water supply system due to potential contamination, and therefore would require a dedicated line at additional cost.
- A Soil Erosion and Drainage Management Plan should be prepared in accordance with the EPA Stormwater Pollution Prevention Code of Practice for the Building and Construction Industry (1999) for the site.
- Any proposal to clear native vegetation on the land, unless the proposed clearance is subject to an exemption under the Regulations of the Native Vegetation Act 1991, requires the approval of the Native Vegetation Council.

The Environment Protection Authority recommends that the following notes and proposed licence conditions are attached to any development authorisation which may be granted in relation to this proposal:

General Environmental Duty

- The applicant is reminded of its general environmental duty, as required by section 25 of the Environment Protection Act 1993, to take all reasonable and practical measures to ensure that its activities on the whole site, including during construction, do not pollute the environment in a way that causes or that may cause environmental harm.

Licence Requirements

- An environmental authorisation in the form of a licence is required for the operation of this development. Scheduled activities under the Environment Protection Act 1993, that will occur as a result of this proposal include:
 - Chemical Storage and Warehousing Facilities;
 - Chemical Works;
 - Metallurgical Works;
 - Mineral Works;
 - Incineration;
 - Waste or Recycling Depot;
 - Activities Producing Listed Wastes;
 - Crushing, Grinding or Milling;
 - Fuel Burning;
 - Discharges to Marine or Inland Waters;
 - Dredging (required during construction phase);
 - Earthworks Drainage (required during construction phase);
 - Concrete Batching Works (required during construction phase).
- The proponent is required to submit a licence application to the Environment Protection Agency a minimum of 12 months prior to the commencement of operation. Conditions of licence will be related to the ongoing management of the operation to ensure its environmental suitability.
- A licence may be refused where the applicant has failed to comply with the development authorisation.
- The Environment Protection Authority is likely to impose conditions of licence to the following effect:

(a) *Proposed Noise Licence Condition 1:* Noise monitoring shall occur during commissioning and annually thereafter at positions nominated by the Environment Protection Authority. The indices L_{amax} , L_{Aeq} and L_{A90} shall be measured as a minimum over consecutive 15 minute periods to record at least the equivalent of 7 days of data. Weather conditions sufficient to determine the Pasquill-Gifford stability category shall be recorded for the measurement period. Attended measurements of the above indices shall occur on two separate occasions during the automatic logging night period. The attended measurements shall also include measurements of the indices in 1/3 octave band spectrum format. A report

summarising the results of the noise monitoring shall be submitted to the nominated Environment Protection Agency Licence Co-ordinator within 14 days of completion of the monitoring.

(b) *Proposed Noise Licence Condition 2:* Where the noise monitoring indicates that operation of facility and ancillary equipment exceeds an equivalent noise level of 35 dB(A) when measured in accordance with the Environment Protection (Industrial Noise) Policy 1994, a noise reduction program shall be carried out. The noise reduction program will comprise identification of the responsible noise sources, determination of the reasonable and practicable measures available, and implementation of these measures following approval of the report by the Environment Protection Authority. The program shall be managed by an acoustic engineer.

- The assessment conducted by the Environment Protection Authority of the proposed project has been completed based upon the environmental standards at the time of assessment. It is recognised that environmental standards are changing rapidly in a number of areas, particularly in regard to the regulation and control of organochlorine emissions. Any improvements that are required as a result of these changing standards will be managed via conditions of the licence required under the Environment Protection Act 1993.

 - (b) the affected retailer has made an offer to supply an additional quantity of gas to the affected customer on that day in accordance with approved terms that has been accepted by the customer,

 - (ii) supply the affected customer with the additional quantity of gas in accordance with the approved terms; and

- (b) require the retailer to use its best endeavours to supply additional quantities of gas to the customer but allow the retailer to interrupt or withhold supply of an additional quantity as necessary in circumstances where the retailer experiences a shortfall in the additional quantities of gas available to the retailer for its affected customers and apportions the shortfall amongst those customers in a manner approved by the Minister by written notice to the retailer; and
- (c) are in other respects no more favourable to the retailer than the pre-existing terms;

gas day means a period of 24 hours commencing at 6.00 a.m.;
