EXEMPTION

Application No. A217 of 2000

The Victorian Civil and Administrative Tribunal has considered an application pursuant to Section 83 of the **Equal Opportunity Act 1995** by the Catholic Education Commission of Victoria ("CECV") and the Catholic Education Office Melbourne (CEO Melbourne"). The application for exemption is to enable the applicants to allow a class of people, namely Aboriginal and Torres Strait Islander people only, to be employed in the position of Koorie Education Worker in Victorian Catholic schools and to allow the publishing of advertisements for such positions.

Upon reading the material submitted in support of the application by the CECV and CEO Melbourne, the Tribunal is satisfied that it is appropriate to grant an exemption from Sections 13, 100 and 195 of the Act to enable the applicants to allow a class of people, namely Aboriginal and Torres Strait Islander people only, to be employed in the position of Koorie Education Worker in Victorian Catholic schools and to allow the publishing of advertisements for such positions.

In granting this exemption, the Tribunal noted:

- The roles and responsibilities of Koorie Education workers as contained in the Catholic Education Commission of Victoria's Draft Guidelines for the Employment of Koorie Education Workers in Victorian Catholic and Primary and Secondary schools include:
 - (a) Assist and support indigenous students to achieve improved educational outcomes;
 - (b) Participation in school activities to assist in creating a culturally inclusive environment; and
 - (c) Encourage indigenous community participation in school education through liaison with individuals and groups.
- It is considered that Aboriginal and Torres Strait Islander people would be better suited to these positions as they would have extensive knowledge of indigenous cultural values and issues, would be accepted by the Koorie community, would be able to communicate in culturally appropriate ways through recognition of shared experiences and understandings of those matters that affect Koorie people, and would be a strong and positive role model for Koorie students.

The Tribunal grants an exemption from the operation of Sections 13, 100 and 195 of the **Equal Opportunity Act 1995**, to enable the applicants to allow a class of people, namely Aboriginal and Torres Strait Islander people only, to be employed in the position of Koorie Education Worker in Victorian Catholic schools and to allow the publishing of advertisements for such positions.

This exemption is to remain in force from the day on which notice of the exemption is published in the Government Gazette until 7 June 2003.

Dated 30 May 2000.

20. STORAGE OPERATOR COSTS

20.1 Subject to sub-clause 21.1 the Authority must pay the Storage Operator an annual source charge which will be determined according to sub-clauses 20.2 and 20.3.

20.2 The Authority must pay the Storage Operator a proportion of the annual source cost for Lake Eppalock with the charge determined by:

$$C_{\text{eppalock}}^{\text{S}} = \$ [(0.82 \times S_{\text{eppalock}}) + R_{\text{epp-G-MW}}]$$

where -

$C_{\text{eppalock}}^{\text{S}}$ = the component of the source cost corresponding to share of Lake Eppalock payable by the Authority, and

S_{eppalock} = the estimated source costs for Lake Eppalock, and

$R_{\text{epp-G-MW}}$ = the Authority's payment, as determined by Government as a return on equity on the headworks asset corresponding to Lake Eppalock;

20.3 The charge for annual source costs must be paid by the Authority every year regardless of the amount of water diverted to, or taken from, Lake Eppalock by the Authority, and do not imply any guarantee of continuous supply, or to supply water at any particular elevation or of any particular quality.

20.4 The Authority may pass the source charge on to the consumer groups and other authorities that are primary entitlement holders under this bulk entitlement, apportioned according to entitlements converted to a common security via an exchange rate, determined by the Minister.

 - (i) must be paid in arrears within 30 days from the end of the month of the Authority receiving an invoice for amounts payable under clause 19; and
 - (ii) must be paid in arrears within 30 days from the end of the month of the Authority receiving an invoice for amounts payable under clause 20.

23. DATA

- 23.1 The Minister will use his/her best endeavours to ensure that all hydrological and other data required by the Authority to comply with this bulk entitlement are made available to the Authority.
- 23.2 The Authority must make available data collected for the purpose of the metering and reporting program under sub-clauses 17.1 and 18.1 to any person subject to a fair and reasonable access fee, imposed by the Authority, to cover the costs of making the data available.

- 24.1 If any difference or dispute arises between the Authority, the other capacity shareholders, the Minister and, with their consent, the Resource Manager, the Storage Operator or any of them (the "parties") concerning the interpretation of application of this Order, which is not resolved within 14 days of it arising, any party may give written notice to the others requiring the matter to be determined by an independent expert, if it is not otherwise resolved, within 14 days of that notice.
- 24.2 The independent expert will be either -
 - (a) a person agreed to by the parties to the difference or dispute; or
 - (b) if those parties cannot agree, a person nominated by the Minister.
- 24.3 The independent expert must reach a conclusion on the matter within 30 days of it being referred, but has power to extend the period for determining the matter by a further 30 days.
- 24.4 The independent expert must send a copy of the conclusion and its supporting reasons to each party to the difference or dispute.
- 24.5 In any difference or dispute to which the Minister is a party -
 - (a) the independent expert must express the conclusion as a recommendation; and
 - (b) the Minister must consider any recommendation made under paragraph 24.5(a) before deciding to give a direction under section 307 or to take any other action under the Act in relation to the difference or dispute.
- 24.6 In any difference or dispute in which the Minister is not a party, any conclusion by an independent expert is final and binding on the parties.
- 24.7 The apportionment of the costs of and incidental to every reference, including the costs of the independent expert, shall be at the discretion of the independent expert.

2. Bulk Entitlements held by other Authorities as Primary Entitlements

Authority	Order
Coliban Water Authority	Bulk Entitlement (Axedale, Goornong & part Rochester) Conversion Order 1999

Schedule 3**Security of Primary Irrigation Entitlements****1. Domestic and Stock Allowances**

The Authority must supply these entitlements before supplying primary irrigation or other entitlements, in accordance with the Act. If, at any time in the future, legislation allows for domestic and stock use in irrigation districts to be restricted in the same proportion as water rights, the Authority will then endeavour to supply them with the same security as Water Rights.

2. Water Rights and Licences supplied as fully regulated entitlement

2.1 Except as set out in this clause, the Authority must endeavour to supply these entitlements with 99% security, based on historical records. This means that the February seasonal allocation for the Campaspe Irrigation District and Campaspe licensed diverters should not drop below 100% water right or licence volume, on average, in more than 1 year out of 100 years.

2.2 The Minister may, by reference to an appropriate computer model, modify the level of security set out in sub-clause 2.1, where the Minister is satisfied that either -

- (a) hydrological conditions have changed since December 1994; or
- (b) the estimated security of supply, based on the irrigation development and operating rules applying at the date of this Order have changed.

2.3 Where the Authority is unable to supply the full water right and licence commitments, the Authority must assess and allocate the available water pro-rata to water right and licence holders, after making provision to supply other primary entitlements in accordance with paragraph 1 of this Schedule, the restriction policies set out in the Orders listed in Schedule 2, and any agreement made under section 124(7) of the Act.

3. Licenses supplied on a partially regulated basis

3.1 The Authority must determine the supply arrangements in any year in accordance with principles -

- (a) proposed to the Minister by the Authority after consultation with its retail customers; and
- (b) approved by the Minister.

3.2 The proposal to the Minister under clause 3.1 must demonstrate that the supply arrangements:

- (a) do not adversely impact on the environmental flows; and
- (b) comply with the conditions specified under clause 6.

4. Sales Water

4.1 The Authority must determine any allocation of sales water made by it in any year in accordance with principles -

- (a) proposed to the Minister by the Authority after consultation with its retail customers; and
- (b) approved by the Minister.

4.2 The Authority must not use a methodology to determine any allocation under sub-clause 4.1 which, based on historical records, would result in the Authority being unable to supply water rights and fully regulated licence entitlements with 99% security.

Schedule 4**Lake Eppalock - Storage Sharing Arrangements****1. Storage Accounts**

- 1.1 Storage accounts will be maintained by the Storage Operator and will be adjusted for:
- (a) the share of inflows apportioned to the Authority; and
 - (b) any release directed by the Authority or water taken by the Authority direct from the storage to meet its water supply requirements including any allowances for in-transit losses; and
 - (c) any internal spill; and
 - (d) any allowance for the Authority's share of passing flows; and
 - (e) any allowance for the Authority's share of evaporation losses or seepage losses from storage; and
 - (f) any allowance for the Authority's share of unregulated releases for dam maintenance or dam safety; and
 - (g) any allowance for temporary or permanent trading between bulk entitlement holders or their customers; and
 - (h) any other adjustment provided for in this Order.

2. Operational arrangements and accounting procedures for supply of water from Lake Eppalock.

- 2.1 The Authority will provide daily separate orders to the Storage Operator for:
- (a) diversions by the Authority and the Authority's customers including other bulk entitlement holders with delivery entitlements from the system waterway between Lake Eppalock and the Campaspe Weir; and
 - (b) diversions by the Authority and the Authority's customers including other bulk entitlement holders with delivery entitlements from the system waterway downstream of the Campaspe Weir.
- 2.2 The Authority will advise the Storage Operator of diversions by the Authority's customers from Lake Eppalock.
- 2.3 The Storage Operator will:
- (a) calculate the actual inflow to Lake Eppalock in accordance with Schedule 5, the storage volume in Lake Eppalock and hence the passing flow required in the Lake Eppalock to Campaspe Weir reach of the waterway under sub-clause 11.1(a);
 - (b) calculate the release needed to supply the Authority's order, making allowance for transit times and expected diversions, inflows and losses in the waterway between Lake Eppalock and Echuca;
 - (c) compare:
 - (i) the passing flow required in the Lake Eppalock to Campaspe Weir reach of the system waterway; with
 - (ii) the expected flow into the Campaspe Weir pool, making allowance for transit times and expected diversions, inflows and losses;
 - (d) if c(ii) is less than c(i), then increase the release from Lake Eppalock to achieve a release estimated to provide the required passing flow c(i),
 - (d) calculate the "modified natural flow" immediately downstream of the Campaspe Siphon (ie at hydrographic station 406202) in accordance with schedule 5, and hence the passing flow required under clause 11.1(b),

- (f) compare:
 - (i) the passing flow required in the Campaspe Siphon to Echuca reach of the system waterway; with
 - (ii) the expected flow just upstream of Echuca, making allowance for transit times and expected diversions, inflows and losses;
- (g) if f(ii) is less than f(i), then increase the release from Lake Eppalock to achieve a release equal to the required passing flow f(i);
- (h) account as releases on behalf of the Authority:
 - (i) any water released to fill the orders received under item 2.1 above; and
 - (ii) any diversions by the Authority's customers from Lake Eppalock; and
 - (iii) any water released to meet losses estimated to be incurred in supplying the above orders; and
 - (iv) 82% of any water released to make up the increase necessary to achieve the required passing flows; and
 - (v) 82% of any water released to meet additional losses estimated to be incurred to achieve the required passing flows;
- (i) account as releases on behalf of other capacity shareholders:
 - (i) any water released to fill orders received from them; and
 - (ii) diversions by them or their customers from Lake Eppalock; and
 - (iii) 18% of any water released to make up the increase necessary to achieve the required passing flow, and
 - (iv) 18% of any water released to meet additional losses estimated to be incurred to achieve the required passing flows;
- (j) make any adjustments to accounts required under clause 1 of this Schedule.

3. Internal Spills

- 3.1 An internal spill is a transfer of the water held in storage in Lake Eppalock by one of the Authorities holding a share of storage capacity to the other Authority holding a share of storage capacity.
- 3.2 An internal spill occurs when one entitlement holder's share of inflow to Lake Eppalock is in excess of the amount necessary to fill its share of storage capacity and the other entitlement holder's share of storage in Lake Eppalock is not full.
- 3.3 The total amount of internal spill held in Lake Eppalock at any one time cannot exceed the volume by which the water held by the receiving entitlement holder in the storage (exclusive of internal spill) is below its full share.

4. Initial Volume in the Authority's Share of Lake Eppalock

At the start of the day that this Order comes into operation, a share of the volume of water held in Lake Eppalock at that time shall be allocated to the Authority by the Storage Operator. This volume is to be calculated as the same proportion of the volume held in Lake Eppalock at that time as its capacity share of the storage as specified in clause 9.

5. Calculation of volume in store

The volume held by the Authority in Lake Eppalock at the end of an accounting period will be calculated from the formula:

$$V_{G-MW(\text{end})} = V_{G-MW(\text{start})} - R_{G-MW} + 0.82 \{ V_{t(\text{end})} - V_{t(\text{start})} + R_t \}$$

where

$V_{G-MW(\text{end})}$ = volume held by the Authority at the end of the period; and

$V_{G-MW(\text{start})}$ = volume held by the Authority at the start of the period; and

R_{G-MW} = total volume accounted as released from Lake Eppalock on behalf of the Authority during the period; and

$V_{t(\text{end})}$	=	total volume held in Lake Eppalock at the end of the period; and
$V_{t(\text{start})}$	=	total volume held in Lake Eppalock at the start of the period; and
R_t	=	total volume ordered and released from Lake Eppalock by capacity shareholders during the period.

6. Evaporation

The total evaporation from Lake Eppalock will be estimated using the formula

$$E_t = A \times (0.81 \times E_{\text{pan}})$$

where

E_t is the total evaporation loss in ML from the lake surface; and

A is the surface area in km² corresponding to total volume in storage; and

E_{pan} is the class A pan evaporation measured in mm at Lake Eppalock (pan evaporation factor taken as 0.81 unless otherwise agreed between the capacity shareholders);

or such other method of estimation as may be agreed between the capacity shareholders.

Schedule 5

Minimum passing flows

1. Operational Tolerances for Meeting Minimum Passing Flows

The following operational tolerances apply for meeting the minimum passing flow for the Campaspe River downstream of Lake Eppalock:

- 1.1 Campaspe River immediately downstream of Lake Eppalock -
- the average flow on any day is not to be less than 95% of the specified flow; and
 - the average daily flow over any continuous 28 day period should not be less than the specified minimum passing flow.
- 1.2 Campaspe River immediately downstream of the Campaspe Siphon -
- the average flow on any day should not be less than 75% of the specified flow; and
 - the average daily flow over any continuous 14 day period should not be less than the specified minimum passing flow.

2. Calculating the “actual” daily inflow to Lake Eppalock and the “modified natural” daily flow in the Campaspe River immediately downstream of the Campaspe Siphon

The Storage Operator in agreement with the Authority must fix a time of day when the daily measurement will be made and adopt one of the following methods for calculating the daily flows specified in clause 11:

2.1 “Actual” inflow to Lake Eppalock

- (a) Method based on water balance

$$Q_{Epp} = V_{Epp} - V_{Epp-1} + R_{Epp} + e_{Epp} + s_{Epp} - r_{Epp} - t_{cw-epp}$$

where

Q_{Epp} = actual inflow into Lake Eppalock over the 24-hour period ending the agreed time of measurement; and

V_{Epp} = volume in store at agreed time of measurement; and

V_{Epp-1} = volume in store recorded 24 hours earlier than the agreed time of measurement; and

R_{Epp} = releases and diversions over the same 24-hour period; and

e_{Epp} = evaporation loss over the same 24-hour period; and

s_{Epp} = seepage loss from storage over the same 24-hour period; and

r_{Epp} = rainfall on storage over the same 24-hour period; and

t_{cw-epp} = any agreed transfers into Lake Eppalock by other Authorities, all expressed in ML.

- (b) Method based on gauged flows at Redesdale & Lyal

$$Q_{Epp} = (Q_{Red} \times f) + Q_{Lyal} - t_{cw-epp}$$

where

Q_{Epp} = actual inflow into Lake Eppalock over the 24-hour period ending the agreed time of measurement; and

Q_{Red} = mean daily flow in the Campaspe River at Redesdale (based on hydrographic station 405213) over the 24-hour period ending the agreed time of measurement; and

f = 1.60 (or other factor agreed between capacity shareholders) representing the catchment area adjustment factor to adjust the gauged flow at Redesdale to the Campaspe River catchment area at Lake Eppalock excluding the Coliban River catchment; and

Q_{Lyal} = mean daily flow in the Coliban River at Lyal (based on hydrographic station 405215) over the 24-hour period ending the agreed time of measurement; and

t_{cw-epp} = any agreed transfers into Lake Eppalock by other Authorities.

2.2 **“Modified natural”** flow in the Campaspe River immediately downstream of the Campaspe Siphon -

(a) Method based on water balance

$$Q'_{Siphon} = Q_{Epp-n} - R_{Epp-n} + D + Q_{Siphon}$$

where

Q'_{Siphon} = estimated “modified natural flow” in the Campaspe River immediately downstream of the Campaspe Siphon over the 24-hour period ending the agreed time of measurement; and

Q_{Epp-n} = inflow (calculated as per 2.1 above) into Lake Eppalock ‘n’ days ago, where ‘n’ refers to the travel time of flow from Lake Eppalock to the Campaspe Siphon, to be estimated hydrologically; and

R_{Epp-n} = releases from Lake Eppalock ‘n’ days ago; and

D = estimated diversions in the reach of Campaspe River downstream of Lake Eppalock and upstream of the Campaspe Siphon, over the 24-hour period ending the agreed time of measurement; and

Q_{Siphon} = Measured flow passing the Campaspe Siphon over the 24-hour period ending the agreed time of measurement.

(b) Method based on gauged flows at Eppalock, Longlea & Runnymede

$$Q^*_{Siphon} = Q_{Epp-n} + (Q_{Lon-m} \times f_1) + (Q_{Run-m} \times f_2) - L$$

where

Q^*_{Siphon} = estimated “modified natural flow” in the Campaspe River immediately downstream of the Campaspe Siphon over the 24-hour period ending the agreed time of measurement; and

Q_{Epp-n} = inflow (calculated as per 2.1 above) into Lake Eppalock ‘n’ days ago; and

Q_{Lon-m} = Gauged flow in the Axe Creek at Longlea (hydrographic station 405214) recorded ‘m’ days ago, where ‘m’ refers to the travel time of flow from the hydrographic station 405214 to the Campaspe Siphon, to be estimated hydrologically; and

Q_{Run-m} = Gauged flow in the Mount Pleasant Creek at Runnymede (hydrographic station 405224) recorded ‘m’ days ago; and

f_1 & f_2 = adjustment factors to estimate the flow resulting at the siphon, to be estimated hydrologically,

L = River losses between Lake Eppalock and the Campaspe Siphon, to be estimated hydrologically.

2.3 The method adopted by the Storage Operator should be that which, in its opinion, provides the best estimate of daily flows. An alternative method to those set out above may be agreed between the Storage Operator and the capacity shareholders.

2.4 The Storage Operator and the Authority must establish the travel times ‘m’ and ‘n’, the adjustment factors ‘f₁’ and ‘f₂’ and the river loss ‘L’, within 4 weeks from the time this Order comes into operation. The values of these parameters may be later re-estimated as and when better methodologies are developed or more data becomes available.

2.5 The Storage Operator must periodically advise the Authority, and any other Authority holding a capacity share of Lake Eppalock, of the adopted method and the period during which that method has been applied.

Schedule 6

Procedure for estimating the climatically adjusted cap for G-MW

The climatically adjusted cap for G-MW is assessed at the end of June each year for the level of development that existed in 1993-94, on the following basis:

1. Modelled Diversions

Modelled diversions are the annual volumes modelled by the Goulburn Simulation Model run number B702 as diversions from the waterway to:

- (a) the Campaspe Irrigation District
- (b) all licensed diverters upstream & downstream of Lake Eppalock including unregulated diverters and transfers to Woodend
- (c) the Goulburn Murray Irrigation District
- (d) the towns of Axedale, Goornong and Rochester

2. Actual diversions

Actual diversions are the recorded annual diversions from the waterway to the above locations.

3. Calculation of accumulated deviation

Each year in July/August, the Resource Manager must calculate the accumulated deviation, since 1 July 1997, of actual diversions from modelled diversions.

4. Management of Diversions

The Authority must manage the diversions to ensure the accumulated deviation of actual diversions from modelled diversions:

- (a) remains within the limits established under the Murray-Darling Basin Agreement; or
- (b) in the absence of any limit in the Agreement, is within 20% of the long-term average modelled diversions at 1993-94 level of development. The long term average modelled diversions are 76483 ML per annum (including unregulated diversions and water transfers to Woodend) as presently estimated from computer modelling undertaken by the Department of Natural Resources and Environment.

5. Cap Compliance [relevant to sub-clause 6.1]

Should the accumulated deviation at the end of the preceding year exceed the allowable accumulated deviation, then the Authority must take action such as allocating less than the available resource in the current year, so as to ensure that the accumulated deviation at the end of the current year is less than the allowable accumulated deviation.
